APPENDIX.

Addition to Cranford—Harefield—Harmondfworth—Hillingdon—Rifelip—Staines—Prefent State of Population in the Parishes treated of in this Volume.—Index of Arms—Index of Names—General Index to the Volume.

EXTRACTS FROM THE ADVERTISE-

"THE diffrict treated of by the author in his former work, having comprised so large a portion of the county of Middlesex, he has been induced, at the suggestion of some of his friends, to offer to the public a similar account of those parishes which he has not already described; and he presumes that another volume on the topography of Middlesex will not be unac-

^{*} See an account of the fourth volume of Lyfons's Environs in M. Epitome, vol. i. p. \$1.

ceptable, as there is no history of that county extant, nor is there any but a very imperfect account of the antiquities of the honour and palace of Hampton Court, which form one of the most prominent features of the present volume. Although many general views of the palace have been engraved, yet the various beautiful specimens of Gothic architecture which there occur, have never been delineated for publication with tolerable accuracy: of the great hall there is an engraving in some esteem (now become fcarce), by Vardy, but the form of the arches is fo inaccurate, as to destroy in a great degree its resemblance to the original." P. iii.

"The same plan has been adopted by the author in this volume as in his former work, nor has he been induced to alter it by any arguments which he has feen among the strictures which it has occasioned. He is aware that a narrative more amusing, might have been produced by excluding much of what is contained in the prefent and in his former volumes; but he had another object in view than merely to furnish an entertaining narra ive, and intended that his work should answer the fame ends of uleful reference as county histories, for which it is hoped it will not be found wholly incompetent. For the purpose of tracing descents and making genealogies, which it is well known have frequently a more important use than the mere gratification of family pride, the dates of births, marriages, and deaths in the vicinity of London (where so many of the nobility and gentry have had a temporary relidence, remote from their family fears), will be found particularly ferviceable for supplying chasms in pedi-

fruitless labour and refearch." P. v. EXTRACTS.

grees, which frequently occasion much

CARDINAL WOLSEY'S ENTERTAIN-MENT OF THE FRENCH AMBASSA-DORS AT HAMPTON COURT PA-LACE.

"AFTER Cardinal Wolfey became possessed of the lease of the manor of Hampton, 'he bestowed (says Stow)

great cost of building upon it, con. verting the manfion - house into fo fately a palace, that it is faid to have excited much envy; to avoid which, in the year 1526, he gave it to the King, who, in recompence thereof, ilicensed him to lie in his manor of · Richmond at his pleasure; and so he · lay there at certain times.' It appears that Cardinal Wolfey after this occasionally inhabited Hampton Court (as keeper perhaps of the King's palace); for in 1527, when some French ambassadors were in England, the King, willing that they should be treated with the greatest respect, sent them to be entertained by Cardinal Wolfey at Hampton Court. The following account * of the entertainment will give the reader an idea of the magnificence of that prelate's establishment: 'Then was there made great preparation of all things for this great affembly at Hampton Court; the Cardinall called before him his principal officers, as steward, treasurer, controleler, and clerk of his kitchen, to whom he declared his mind touching the entertainment of the Frenchmen at Hampton Court, commanding them neither to spare for any cost, expence, or travayle, to make such a triumphant banquet as they might ' not only wonder at it here, but also make a glorious report of it in their country, to the great honour of the King and his realm; to accomplife his commandment they fent out ca-ters, purveiors, and divers other persons, my Lord's friends, to make preparation; also they sent for all the expert cookes and connying persons in the art of cookerie which were within London or elsewhere, that ' might be gotten to beautify this noble feast; the purveiors provided, and my Lord's friends fent in fuch provision as one would wonder to have feen. The cookes wrought both day and night with futtleties and ' many crafty devices, where lacked neither gold, filver, nor other coffly thing meet for their purpole: the yeomen and groomes of the wardrobe were busied in hanging of the chambers, and furnishing the same with beds of filk and other furniture in every

"! Taken from a MS. copy of Cavendish's Life of Wolsey in the British Museum (Harl. MSS. No. 428.), much of which is omitted in the printed copies."

degree:

degree: then my Lord Cardinall fent me (Mr. Cavendish), being his gentleman usher, with two other of my · fellows thither, to forefee all thing touching our rooms to be nobly gar-'nyshed: accordingly our pains were not fmall nor light, but daily travel-· ling up and down from chamber to chambers—then wrought the carpenters, joiners, masons, and all other artificers necessary to be had to glo-rify this noble feast. There was car-riage and recarriage of plate, stuff, and other rich implements, fo that there was nothing lacking that could be imagined or devised for the pur-pose. There was also provided two hundred and eighty beds furnished with all manner of furniture to them belonging, too long particularly to be rehearfed, but all wife men do fufficiently know what belongeth to the 'furniture thereof, and that is fuffi-' cient at this time to be faid.

" ' The day was come to the French-'men affigned, and they ready affembled before the hour of their appointment, wherefore the officers caufed them to ride to Hanworth, a ' place and parke of the Kinges, within three miles, there to hunt and · spend the day untill night, at which time they returned againe to Hampton · Court, and every of them was conveyed to their feverall chambers, having in them great fires, and wine to their comfort and relief, remaining there untill their supper was ready. The chambers where they supped and banquetted were ordered in this fort : first the great wayting chamber was hanged with rich arras, as all other were, and furnished with tall ' yeomen to ferve. There were fet tables round about the chamber, banquet-wife covered; a cupboord was there garnished with white plate, having 'alfo in the fame chamber to give the more light, four great plates of filver fet with great lights, and a great fire of wood and coales. The next chamber, being the chamber of prefence, was hanged with very rich arras, and a fumptuous cloth of estate furnished with many goodly gentlemen to ferve the tables, ordered in manner as the other chamber was, faving that the

high table was removed beneath the · cloch of estate toward the middest of the chamber covered. Then there was a cupboord, being as long as the chamber was in breadth, with fix deskes of height, garnyshed with guilt plate, and the nethermost desk was garnyshed all with gold plate, having with lights one paire of candlestickes of filver and guilt, being curioufly wrought, which cost three hundred markes, and standing upon the same, two lights of waxe burning as bigge as torches to fet it forth. This cupboord was barred round about, that no man could come nigh it, for there was none of all this plate touched in this banquet, for there was sufficient besides. The plates that did hang on the walls to give light were of filver and guilt, having in them great pearchers of waxe burning, a great fire burning in the chimney, and all other things necessary for the furniture of so noble a feast. Now was all things in a readiness, and fupper tyme at hand, the principal officers caused the trumpetters to · blow to warne to supper: the officers discreetly went and conducted these noblemen from their chambers into the chambers where they should suppe, and eaused them there to sit downe, and that done their fervice came up in fuch abundance, both coftly and full of futtleties, and with fuch a pleasant noyse of instruments of musicke, that the Frenchmen (as 'it seemed) were rapt into a heavenly paradise. You must understand that my Lord Cardinall was not yet comen 'thither, but they were merry and pleafant with their fare and devifed furtleties. Before the second courfe my Lord came in, booted and fourred, all fodainely amongst them, and bade them proface 1; at whose coming there was great joy, with rifing every man from his place, whom my Lord caused to sit still and keep their roomes, and being in his apparell as he rode, called for a chayre and fat down in the middeft of the high pas radife, laughing and being as merry as ever I saw hym in all my lyff. Anone came up the second course, with fo many dishes, suttleties, and

11 2 devices.

devifes, above a hundred in number, which were of fo goodly proportion and fo coulty, that I thinke the French-" men never law the like, the wonder was no less than it was worthy indeed. There were caftles with images, in the fame Paul's church, for the equantity as well counterfeited as the painter should have painted it on a cloth or wall. There were beafts, birds, foules, and perfonages most · lykely made and counterfeited, fome fighting with fwords, some with guns and crofs-bows, fome vaughting and · leaping, some dauncing with ladies, · fome on horses in complete harnesse, ' justing with long and sharpe speares, with many more devises. all, one I noted was a cheffe-boord, " made of spiced plate, with men there of the fame, and for the good propor-'tion, and because the Frenchmen be very cunning and expert in that play, my Lord Cardinall gave the same to a gentleman of France, commanding there should be made a goodly case for the preservation thereof in all haft, that he might convey the fame fafe into his countrey. Then tooke my Lord a bole of golde filled with Ipocrasse, and putting off his cap, faid, I drinke to the King, my Soveraigne Lord, and next unto the King your master, and therewith dryncke a good draught; and when he had done, he defired the graund maistre to pledge him, cup and all, the which was well worth 500 markes, 4 and fo caufed all the boords to pledge these two royal princes: then went the cups fo merrify about, that many of the Frenchmen were faine to be led to their beds. Then rose up my Lord, and went into his privy chams ber to pull off his bootes, and to shift him, and then went he to supper, and making a very fhort fupper, or rather a repast, returned into the chamber of presence to the French-" men, using them so lovingly and familiarly, that they could not commend him too much; and whileft they were in communication, and other pastimes, all their liveries were · ferved to their chambers; every chamber had a bason and an ewer of

' filver, a great liverey pot of filver, and fome guilt; yea, and fome chambers had two livery pots, with wine and beere, a boule, a gobler, and a pot of fylver to drink in, both for their wine and beere; a tilver candletticke both white and plaine, having in it two fizes, and a staffe torche of waxe, a fine manchet, and Thus was every chama cheat loaf. ber furnished through the house; and yet the cupboords in the two banqueting chambers were not touch. ed. Thus when it was more than time convenient, they were conveyed to their lodgings, where they refted that night. In the morning, after they had heard mass, they dined with the Cardinall, and fo departed to Windfor'." P. 58.

PHILIP AND MARY, &c.

" PHILIP and Mary kept their Christmas at Hampton Court with great folemnity in 1558. The great hall of the palace was illuminated with 1000 lamps curioufly disposed; the Princels Elizabeth supped at the fame table with the King and Queen next the cloth of state, and after fupper was ferved with a perfumed napkin and plate of confects by the Lord Paget; but the retired to her ladies before the revels, maskings, and difguifings began. On St. Stephen's day she heard matins in the Queen's closet, when she was attired in a robe of white fatin, ffrung all over with large pearls. On the 29th of December, the fat with their Mae jesties and the nobility at a grand spectacle of justing, when 200 spears were broken. Half of the combatants were accourred in the Almaine, and half in the Spanish fashion.' Queen Elizabeth after she came to the throne frequently refided at Hampton Court. She kept her Christmas there in 1572, and again in 1593 *." P. 63.

COWAY STAKES.

"ABOUT a furlong to the west of Walton bridge †, which connects this parish (Sheperton) with Walton, in Sur-

"" Queen Elizabeth's Progresses."

4 "Walton bridge was first built of wood, at the expense of Samuel Dicker,
Esq. of Walton, pursuant to an act of parliament passed 20 Geo. II. It was
similated in 1750, under the direction of William Etheridge, the architect. The
centre arch, 130 seet in breadth, was esteemed a very remarkable piece of
mechanisses.

Dicker, It was t. The piece of hanish

rey, are the celebrated Coway Stakes, supposed by some antiquaries to have been placed to oppose Cæsar's passage over the I hames. Dr. Owen and Mr. Daines Barrington are of opinion, that Cæfar never did crofs the river which we now call the Thames. They both argue that the river which he describes does not at all refemble the Thames, and that the fhortness of his stay in this country rendered it impossible that he could have croffed that river, and penetrated into Middlefex . Camden, Gale, and Stukeley contend +, that he croffed the Thames at Coway Stakes, and suppose that he rested his troops at the great camp on St. George's Hill near Chertfey. General Roy feems to incline to the fame opinion 1; but supposing that the learned antiquaries above mentioned are wrong in respect to Cæsar's passage of the Thames, and that he did crofs it fomewhere in this neighbourhood, the arguments against the Coway Stakes being those which were placed to oppole his pallage, feem to preponderate, and it appears much more probable that they are the remains of a fifthing wear y." P. 219

HENRY VIII. OBLIGES LORD WIND-SOR TO EXCHANGE THE MANOR OF STANWELL.

"KING Henry VIII. having been advised to dispose of the monastic lands by gift, or exchange, to the principal nobility and gentry, thought fit to make an exchange of this fort with Andrews Lord Windfor. To this To this purpose he sent a message that he would dine with him at Stanwell, where a ingly provided. The King then informed him that he liked his place fo well, that he was relolved to have it, though not without a beneficial exthange. Lord Windfor made answer, that he lipped his highness was not in earnest, since Stanwell had been the

feat of his ancestors for so many generations; the King with a stern countenance replied, that it must be, commanding him on his allegiance to repair to the Attorney General, and fettle the business without delay. The Attorney General showed him a conveyance, ready prepared, of Bordefley Abbey, in the county of Worcester, with all its lands and appurtenances, in exchange for the manor of Stanwell. Being constrained, through dread of the King's displeasure, to accept of the exchange, he conveyed this manor to his Majesty, being commanded to quit Stanwell immediately, though he had laid in his Christmas provisions for the keeping his wonted hospitality there, all which he left in the house, saying they should not find it bare Stanwell."-P. 250.

SUNBURY-SINGULAR BEQUEST.

"THE following fingular benefac-tion to the poor of this parish, long ago loft, is copied from the register.

" November the first day, 1636. I do give unto the vicar and churchwardens, and vicars and churchwardens fuccessively, the white mare and mare colt with a white star in the forehead, which I bought of Walter Evans, for the use of the poor of the faid parish of Sunbury for ever, entreating and appointing the faid churchwardens to fee to them as their owne, and what issue it shall please God to give them, to fell the male issue at the fittest time of age, and pay the money to the poor of the faid parish, and keep the female for breed; and I appoint the good man Piper the elder, and George Blundell, and whom they shall name in their room when they die, to fee this to be duly executed according as I have appointed; and if the church-' wardens thall be negligent to do as I do appoint, they for to admonish

mechanism. In 1780, the bridge having become ruinous, Michael Dicker Sanders, Efq. in whom the property was then veiled, obtained an act of parliament to rebuild it, and an increase of tolls. The present bridge, which is of brick, confills of four principal, and feveral small arches, which extend on each fide to a confiderable extent to obviate the inconvenience of floods. Walton bridge is now the property of Mr. Sanders."

" See their papers in vol. ii. of the Archæologia."

† "See Gough's Camden's Britannia, vol. ii. p. 2, and p. 12. and Stuke-ley's Itin. Curiol."

them to amend, and if they do not amend after reasonable warning, then I do give the said Piper and Blundell leave to sell them, and give the money to what poor they think fit.—

JEREMY NORCROSSE'." P. 286.

L. Pennant's View of India extra Gangem, &c. (Concluded from p. 212.)

JAVA-ACCOUNT OF THE UPAS OR POISON TREE.

"THE tree, fo long famed in many of the East India islands for the wonderful, and almost incredible effects of its poisonous juice, has hitherto eluded the prying eye of the naturalift; and, confequently, its class in the botanical system has never yet been ascertained, notwithstanding the indefatigable refearches of Europeans to obtain full information upon fo interesting a fubject; all we know for certain of the tree itself is, the figure of its leaf, and fruit, which the learned and accurate Rumphius has exhibited in the Herbarium Amboinense. After much entreaty, and persevering application to the Dutch governors of Celebes (the most noted of all the islands of the East Indies for the production of this tree), Rumphius was favoured by De Cops, governor of Macassar, with a branch of it, and a specimen of its poisonous juice. An enfign of the army was deputed in form to be the mellenger of fo rare a prefent. Of fuch a penetrating and malignant nature was this found to be, that the very touching with the hand the bamboo in which it was enclosed, occasioned a tingling and numbness like that felt in a limb that had been exposed to intense cold, and suddenly brought to the fire.

"Nature has wifely ordained that this baneful tree flould be extremely rare, and its fituation the most fequestered from the bufy haunts of men, amidst mountains of difficult access, and inhabited by the most barbarous tribes; they alone are acquainted with the effects that this subtile poison has upon the circumambient air, and such animals as approach its tremendous shade. The atmosphere is here said to be so infected by the deleterious quality of the effluvia of this pessileatial tree, that birds which accidentally perch

upon its boughs are feized with torpor, and drop down dead. No man dares approach it without his hands, feet, and head being well fhrouded with linen cloths; were this precaution neglected, he would become benumbed, and prefently lofe the use of his limbs. The dripping of rain water from the tree upon the body, causes it to swell; and should it fall upon the bare head, the loss of all the hair would ensue. No other tree can exist in its vicinity, and the earth beneath it is parched and withered; so that death seems eminently to have fixed his station here.

"It is no wonder that the love of the marvellous, natural to mankind, has added somewhat to the truly associating scenes that the environs of this tree exhibit. Hence the rude nations of this mountainous tract have made it the habitation of a serpent, whose eyes glare like fire in the night, and remind us of the tabled gardens of the Hesperides in classic lore, whose stationary centinel

was a watchful dragon.

"The Dutch call this tree Macafferne Gift-boom, or Spatten-boom; and in the Malaye language it is termed Caju-Upas, that is to fay poison-tree, and the fruit simply Upas. By the people of Macassar, and throughout Celebes, both the tree and its poison are called Ipo." Vol. iv. p. 42.
"Mr. Foersch gives us an account

of the fatal effects in the following melancholy narration. In the year 1776, in the month of February, I was prefent at the execution of thirteen of the emperor's concubines, at Soura Charta, who were convicted of infidelity to the emperor's bed. 'It was in the forenoon, about eleven o'clock, when the fair criminals were led into an open space within the ' walls of the emperor's palace. There ' the judge paffed fentence upon them, by which they are doomed to fuffer death by a lancet poisoned with Upas. · After this the Alcoran was prefented to them, and they were, according to the law of their great prophet Ma-· homet, to acknowledge and to affirm

by oath, that the charges brought against them, together with the sentence and their punishment, were fair and equitable. This they did by laying their right hands upon the Alcoran, their left hands upon their breasts, and their eyes listed towards

heaven; the judge then held the Alcoran to their lips, and they kiffed it.

3

" These ceremonies over, the executioner proceeded on his buliness in the following manner :-- Thirteen posts, each about five feet high, had been previously erected; to these the delinquents were fastened, and their breafts stripped naked. In this fitu-'ation they remained a short time in continual prayers, attended by feveral priefts, until a fignal was given by the judge to the executioner, on which the latter produced an instrument, much like the fpring lancet used by farriers for bleeding horles, With this instrument, it being poisoned with the gum of the Upas, the unhappy wretches were lanced in the middle of their breafts, and the operation was performed upon them all in less than two minutes.

" My affonishment was raised to the highest degree, when I beheld the 'fudden effects of that poison, for in about five minutes after they were lanced, they were taken with a tremor, attended with a subsultus tendinum, after which they died in the greatest agonies, crying out to God and Mahomet for mercy. In fixteen minutes by my watch, which I held in my hand, all the criminals were 'no more; fome hours after their death, I observed their bodies full of livid spots, much like those of the petechia, their faces swelled, their colour changed to a kind of blue, their eyes looked yellow, &c. &c.? *." Vol. iv. p. 49.

SPICY ISLANDS -- BIRDS OF PARADISE.

"THE long celebrated Manucodiate or birds of Paradile, first begin to appear in these islands. These birds, so fingular in the structure and disposition of their feathers, so elegant in their form, and fo romantic in their history, gave occasion, foon after their discovery, to the supposition of their having been the celebrated phænix of the ancients. The learned Forster, with his usual depth of judgment, hath collected every thing relating to that ideal ed by any naturalities. There is reason

bird, in his Latin and German translation of the Indian Zoology, and effectually disproved that the invention originated from any one of this genus. I refer the reader to his differtation, and barely mention, that the ancient describers of the phoenix give it the form and fize of an eagle, with an exquifite richness of colouring; they say that it lived DCLX years, and at the completion of that period, formed its neft with the twigs of the most odoriferous trees, and died upon them. A young one fprung from its remains, and conveyed them to Panchaia, the city of the sun, performed the funeral rites, and placed them on the altar. Pliny, from whom this relation was taken, adds, that it was reported one had been brought to Rome, but, with his ufual good fense, stamps on it the charge of fiction.

"Notwithstanding the remoteness of the native country of this whole genus, I cannot absolutely affirm the impossibility of the ancients being acquainted with some of the species. They had from distant times a regular trade with India. Before the days of Ptolemy, they pushed their navigation beyond the peninfula of Malacca to Cattigara, the modern Ponteamas, and the Metropolis Sina, the present Cambodia. Notwithstanding the ancients might have penetrated no farther, yet, as the Indians were extremely commercial, the Romans might receive from them accounts of the most distant isles, their commodities, and even their curiofities. The birds of India were known to the Romans; it is possible that they might have feen, or at least heard of those of Paradife: no words could better fuit these most singular species, than discolores maxime et inenarrabiles +, birds of different colours, and not to be described; and few are more difficult to be represented in words, than those of this genus.

"The time in which they were brought to Europe was very early, and I fuspect long before they were observ-

† " Plin. lib. 10. cap. 11."

^{. &}quot;Though the recent information obtained in the course of Lord Macartney's Embassy to China, vol. i. p. 272, totally invalidates the authority of Foersch, yet it appears evident that trees of a most deleterious nature, and productive of the most active poisons, really exist in Java. Such also was the opinion of the author of this work, whose depth of judgment placed him far remote from the imputation of credulity; I have therefore ventured, as in other instances, to publish a faithful copy of the original manuscript. E.

to believe that the Turks received them by means of the Arabians, who procured them from India by their commerce on the Red Sea or Perfian Gulf, and fold them for ornaments to the turbans of the great officers of the Japiffaries. Beion first took notice of them, and credulously believed them to have been the phænix; in one place he supposes them to have been the rhyntaces; he justly describes them as forming a valt mass of feathers issuing from a small body, out of which the Arabians had extricated the flesh; which agrees with the usual method of preparation. Nicholas de Nicholai actually gives the figure of a captain of Janissaries ornamented with its plumes: Gefner is the first who canfed this bird to be engraven, and his figure and that of Clufius was long copied by fucceeding naturalists.

in their limits than the birds of Paradife. They are confined within the Papua iflands, and that of New Guinea, and are found only from latitude 8° fouth, to lat. 3° north of the equator, and between longitude 127 and 140.

"Such is the general view of these wonderful birds. The Paradisea Apoda, of which there are two varieties called the greater and leffer birds of Paradite, chiefly inhabit the Arron ifles. They are natives of both New Guinea as well as of these islands, are supposed to breed in the first, and reside there during the wet monfoon, but retire to the Arron ifles, about a hundred and forty miles to the east, during the dry or western monloons. In the east monfoon they moult their long feathers, but recover them in the west. They always migrate in flocks of thirty or furty, and have a leader, which the inhabitants of Arrou call the king: he is faid to be black, to have red spots, and to fly far above the flock, which never defert him, but fettle where he fettles. They conflantly avoid flying with the wind, which ruffles and blows their loofe plumage over their heads, and often forces them down to the ground, from which they are unable to rife without fome advantage; hard showers of rain are equally deftructive to them. When they are surprifed with a strong gale, they inflantly foar to a higher region, beyond the reach of the tempest; there

they float at ease in the series sky, on their light flowing seathers, or pursue their journey in security; during their slight they cry like starlings, but in the distress of a storm blowing in their rear, they express it by a note resembling the croaking of ravens.

" When they alight, it is on the highest trees, the king taking the lead; they prefer the waringa parvifolia, on the berries of which these birds and various forts of parrots feed; fome fav that they feed on nutmegs, on butterflies, and even small birds; the strength of their claws favours that opinion; yet that circumftance may also be requifite to birds, which are always to live perched. The natives of Arrou watch their arrival, and either shoot them with blunt arrows, or catch them with bird-lime or noofes; when taken, they will make a vigorous relistance, and defend themselves stoutly with their bills; they are inflantly killed, exenterated, and the breaft-bone taken out, then dried with finoke and fulphur, and exported to Banda, where they are fold for half a rix-dollar, but on the fpot for a spike-nail, or a bit of old iron. They are exported to all parts of India and to Persia, to adorn the turbans of people of rank, and even the trappings of the horses, as I have before mentioned; they even reach Turkey *.

" No birds have ever had fo much fable mixed with their history; it was believed, that they remained always floating on the spicy Indian air, and of course not to be in want of legs or feet, of which they were supposed to be destitute; that when they wanted to fleep, they hung themselves by their two long feathers to the boughs of a tree; that they performed the act of love during their flight, and that even ovation, and exclusion of the young, was discharged in that element, the male receiving the egg in an orifice nature had given it for that purpose; that they lived on the dew of heaven, and had no evacuation like other mortal birds. From their being fo much converfant in the higher regions, the Portuguese styled them Passaros da fol, or sparrows of the sun; the islanders Manu-co-derwata, or the birds of God, and most of the Europeans name them the birds of Paradife. So happily did

^{• &}quot;In the fpring of 1799 they formed an additional ornament to the elegant head-dress of the British fair. E.?"

the opinion work on the little kings of the ifles, that feeing them descend (as it often happened) dead from the heavenly regions, they became converis to the truth of the immortality of the foul." Vol. iv. p. 148.

S.

RUMPHIUS THE NATURALIST.

"NO country was ever fo happy in a florist as Amboina. The celebrated George Everard Rumphius made it his residence a great number of years. He was born in 1627, and became doctor of physic in the university of Hanover. He went over to this island in character of conful and merchant; and applied his leifure moments to the fludy of botany; but by the vaft fruits of his labours, he must be supposed to have dedicated his whole time to that purfuit. By his continual refearches after plants, and other objects of natural history, on this burning foil, he had, at the age of forty-three, the misfortune of losing his fight. Notwithstanding this he persevered in his pursuits, and being deprived of his vifual faculties, acquired that of diffinguishing plants by the fenfes of feeling and fmell. He formed a Hortus Siccus, in ten folio volumes, and in 1690 dedicated them to the governor and council of the East India Company, who deposited it in the India house at Amsterdam; with them he probably deposited his description of fishes, and other animals of the island. His botanical labours were not printed during his life; they had the good fortune to fall into the hands of that able naturalist Doctor John Burman, who published the first volume of the celebrated Herbarium Amboinense in 1740, and completed the whole by the year 1751. It consists of fix folio volumes, and an Auduarium, which are illustrated with seven hundred plates, relative to the subject, besides two portraits, one of Rumphius, in the fixiy-eighth year of his age, in a flate of blindness. He is represented feeling the plants and shells, placed before him on a table; the other portrait is of his publisher, Doctor Burman. I do not know for certain the time of his death; it probably was at Amboina, for he dates the dedication of his Hortus Siccus, from the castle of Victoria, 1690, in the 63d year of his age.

"Governor Loten gave a curious anecdote in respect to the fate of his drawings and description of the fishes Vol. IV.-No. XXXVII.

of the island. There is reason to suppose that they were sent into the world in 1726, in a work published by Francis Valentyn, a Dutch clergyman, who had resided in the Molucca and Banda islands. Baron Imhost, governor-general of the Indies, communicated to Mr. Loten his suspicions that Valentyn got the materials out of the India house by means of his fon-in-law, who was first clerk to the secretary of the company; these Valentyn basely applied to his own use, not daring to make the acknowledgment; certain it is, they never could be found, notwithstanding the most diligent search has been made after them. Valentyn's work was published under the title of India Orientalis antiqua et nova, in five volumes folio. The figures of the fishes lie under the imputation of being fictitious, from the extravagancy of their forms; but I am told it is far from being the case, nature having sported wonderfully in the construction of those of the Amboinese seas.

"The other works of the great Rumphius were the Imagines Piscium teftaceorum, first printed at Leyden in figures are finely executed. He might have added cruftaceorum, for there are besides in that work numbers of the lobster and crab kind. No fort of letter-press attends this work, except a catalogue of the subjects, with the names in different languages, especially the Indian. From the immenfity of his labours, he justly left behind him the title of the Pliny of the Indies." Vol. iv. p. 170.

PAPUAN ISLANDS -- VAST CHAME, OR MONSTROUS SHELLS.

" DAMPIER calls them cockles; he fays that at first he could get only fmall ones of ten pounds weight, but afterwards his men brought him a fingle shell that weighed two hundred and fifty-eight pounds, so that the pair must have weighed five hundred and fixteen pounds, exclusive of the fish, which in some weighs thirty pounds. This is effeemed very good flewed; and, with the Sago bread of thefe islands, may at any time be a sure re-lief to navigators. By reason of the fize of these shells, it is unsafe to attempt taking them into a small canoe: the method of managing them in such circumstances is to put a pole into the gaping gaping fhell, which inflantly closes, and holds fo fast that it may be drawn up to the furface of the water; the fifh, on being stabbed with a cutlass, dies immediately, and may be taken out, and the shells dropped into the sea .-M. Da Costa says, that fometimes a pair of thells weigh fix and even feven hundred pounds. Mr. Gmelin relates that the fith is large enough to feed a hundred and twenty men, and that the shells are able to snap a cable in two, or to cut off a man's hand! The last I can credit, possibly the first is an exaggerated proof of their strength." Val. iv. p. 204.

ARABS.

" I CANNOT quit this part of the coast without mentioning a singular communication made to Captain Forrest, by the natives of Eff-be, in the island of Mixoal, that on the coast of New Guinea, not far from a gulf about a day's fail from Wanim, or Onin, a place about twenty leagues from the north-east of the isle of Goram, was a fet of people who wore large turbans. He imagines them to have been the posterity of a colony of Arabs. If this is true, their discovery will be just as important to the world as that of the race of Owen Gwynedd, long lost to the Britons, till it has been lately credited that they still exist in America, under the title of Padoucas, or Welsh Indians."-Vol. iv. p. 234.

LI. Turner's Embaffy to the Court of the Testino Lama. (Continued from p. 218.)

A TIBET VILLAGE

BY no means makes a handsome figure. The peasant's house is of a mean construction, and resembles a brick-kiln in shape and size, more exactly than any thing to which I can compare it. It is built of rough stones, heaped upon each other without cement, and, on account of the strong winds that perpetually prevail here, it has never more than three or four small as ertures to admit light. The roof is a flat terrace, surrounded with a parapet wall two or three feet high; on this, are commonly placed piles of

leose stones, intended to support a small flag, or the branch of a tree; or else as a sastening for a long line, with scraps of paper, or white rag, strung upon it like the tail of a kite: this being stretched from one house to another is a charm against evil genii, as infallible in its efficacy as horseshoes nailed upon a threshold, or as straws thrown across the path of a reputed witch," P. 215.

n

CUSTOM OF PRESENTING A WHITE SCARF.

"THIS is an offering invariably attendant on every intercourse of ceremony, as well in Tibet as in Bootan. A similar piece of filk is always transmitted under cover, with letters, even from the most distant places, whether they be merely complimentary, or relate to public bufiness of importance; and indeed between people of every rank and station in life, the presenting a filk fearf constantly forms an essential part of the ceremonial of falutation. If perfons of equal rank meet, an exchange takes place; if a superior is approached, he holds out his hand to receive the fcarf, and a fimilar one is thrown across the shoulders of the inferior by the hand of an attendant, at the moment of his difmission. The colour that is employed on this occafion is either white, or crimfon; but the latter is least frequently used, white appearing to have an universal preference. This manufacture is of a thin texture, refembling that fort of Chinese stuff called pelong, and is remarkable for the purity of its gloffy whiteness. They are commonly da-masked, and the facred words Oom maunce paimee oom are usually interwoven near both ends, which terminate in a fringe. They differ materially in fize and quality, and are commonly proportioned, by him who prefents, to his own condition, and the degree of respect he means to pay his guest. Trivial and unmeaning as this custom may appear to Europeans, long and general practice has here attached to it the highest importance. I could obtain no determinate information as to its meaning or origin; but I find that it has indeed a most extensive prevalence. It is observed, as I have before noticed, in all the territory of the Daeb Raja; it obtains throughout Tibet; it extends from Turkistan to the confines of the Great Deiert; it is practifed in China, and, I doubt not, reaches to the limits of Mantchieux Tartary. I view it merely in the light of an emblem of friendship, and a pledge of amity. In the course of my travels, every person who vifited me, observed this mode of falutation; and as we were among a people not very conversant with the various customs of different nations, and who probably would have confidered any obvious deviation from their own in no very favourable point of view, I never hefitated, when waiting upon the chief, to falute him in his own The letters I received in Tibet and Bootan were constantly accompanied by a pelong scarf, and, in conformity with the custom, I always fent one in return. Of fo much moment indeed, in their estimation, is the observance of this formality, that Mr. Goodlad, the refident at Rungpore, informed me, that the Raja of Bootan once returned to him a letter he had forwarded from the Governorgeneral, merely because it came unattended with this bulky incumbrance, to testify its authenticity." EXTRAORDINARY MORTIFICATIONS OF A DEVOTEE.

"THE Gosein, whose name is Pranpooree, exhibited so extraordinary an instance of religious penance, that I cannot resist the temptation of relating some particulars of his life.

" Having been adopted by an Hindoo devotee, and educated by him in the rigid tenets of his religion, he was yet young, when he commenced the course of his extraordinary mortifications. The first vow, which the plan of life he had chosen to himself induced him to make, was to continue perpetually upon his legs, and neither to fit down upon the ground nor lie down to rest, for the space of twelve years. All this time, he told me, he had employed in wandering through different countries. When I inquired how he took the indispensable refreshment of fleep, when wearied with fatigue, he faid, that at first, to prevent his falling, he used to be tied with ropes to fome tree or post; but that this precaution, after some time, became unnecessary, and he was able to fleep standing, without such support.

" The complete term of this first penance being expired, the next he undertook was to hold his hands, locked in each other, over his head, the fingers of one hand dividing those of the other, for the same space of twelve years. Whether this particular period is chosen in compliment to the twelve figns of the zodiac, or to the Indian cycle of twelve years, I cannot decide. He was still determined not to dwell in any fixed abode; fo that before the term of this last vow could be accomplished, he had travelled over the greater part of the continent of Alia. He first fer out, by croffing the peninfula of India, through Guzerat; he then paffed by Surat to Buffora, and thence to Constantinople; from Turkey he went to Ifpahan, and fojourned to long among the different Perfian tribes as to obtain a confiderable knowledge of their language, in which he converfed with tolerable ease. In his passage from thence towards Russia, he fell in with the Kusfaucs (hordes of Cosfacs) up. on the borders of the Caspian sea where he narrowly escaped being condemned to perpetual flavery: at length he was suffered to pass on, and reached Moscow; he then travelled along the northern boundary of the Russian empire, and through Siberia arrived at Pekin in China, from whence he came through Tibet, by the way of Teshoo Loomboo, and Nipal, down to Calcutta.

"When I first saw him at this place, in the year 1783, he rode upon a piebald Tangun horse from Bootan, and wore a fatin embroidered drefs, given to him by Teshoo Lama, of which he was not a little vain. He was robust and hale, and his complexion, contrasted with a long bushy black beard, appeared really florid. I do not suppose that he was then forty years of age. Two Goseins attended him, and affitted him in mounting and alighting from his horfe. Indeed he was indebted to them for the affiftance of their hands on every occasion; his own being fixed and immoveable, in the polition in which he had placed them, were of courfe perfectly use-

"The circulation of blood feemed to have for faken his arms; they were withered, void of fensation, and inflexible: yet he spoke to me with confidence of recovering the use of

Kk 3 then

them, and mentioned his intention to take them down the following year, when the term of his penance would

expire.

"Other Goseins assured me, though I could not help doubting the fact, that it is practicable to restore withered limbs, thus circumstanced, to perfect nfe. This is effected, they fay, though not with ut great labour, and fome pain, by means of long-continued friction, before a large fire, with a certain ointment which they compound. To complete the full measure of his religious penance, I understood that there still remained two other experiments for Pranpooree to perform. In the first of these the devotee is sufpended by the feet to the branch of a tree, over a fire, which is kept in a continual blaze, and fwung backwards and forwards, his hair passing through the flame for one pahr and a quarter, that is, hree hours and three quar-Having paffed through this fiery trial, he may then prepare him-felf for the last act of probation, which is to be buried alive, standing upright, in a pit dug for the purin upon him, fo that he is completely covered. In this fituation he must remain for one pahr and a quarter, or three hours and three quarters, and if at the expiration of that time, on the removal of the earth, he should be found alive, he will afcend into the highest rank, among the most pure of the Yogee (Jugi)." P. 270,

SEASONS IN TIBET -- MANNER OF PRESERVING MEAT, &c. -- VALUE OF SHEEP.

" IN the temperature of the feafons in Tibet a remarkable uniformity prevails, as well as in their periodical duration and return. The same division of them takes place here as in the more fouthern region of Bengal. The spring is marked from March to May, by a variable atmosphere, heat, thunder-florms, and occasionally with refreshing showers. From June to September is the feafon of humidity, when heavy and continued rains fill the rivers to their brim, which run off from hence with rapidity, to affift in inundating Bengal. From October to March a clear and uniform fky fucceeds, feldom obscured either by fogs or clouds. For three months of this

feafon a degree of cold is felt, far greater perhaps than is known to prevail in Europe. Its extreme feverity is more particularly confined to the fourhern boundary of Tibet, near that elevated range of mountains which divides it from Assam, Bootan, and

Nipal.

"The fummits of these are covered all the year with fnow, and their vicinity is remarkable, at all feafons, for the dryness of the winds. The range is confined between the twenty-fixth and twenty-feventh degrees of northern latitude. During the winter, a practice is adopted in the neighbour. hood of these mountains similar to that in use in the coldest parts of North America, but in some respects more complete. I mean, that of preparing meat and fish for carriage, by the action of extreme cold; a mode more particularly adopted by the Indians, who convey to their markets, at many hundred miles distance, their poultry, game, and fish, in a frozen state. But in Tibet the practice is confined, as far as came to my knowledge, to the prefervation of mutton alone, and the process is extremely fimple. They kill, clean, and ftrip the animal of his skin; he is then placed upon his legs, in a commodious place, and left exposed to a free access of frosty air, until all the juices in his body are completely dried up, and the whole becomes one uniformly stiffened substance. It is then in a fit flate for carriage to any part of Tibet, and for keeping to any scason of the year. No salt is used in the preparation. I had supplies of this prepared meat during all the time I remained at Teshoo Loomboo, which had been cured in the preceding winter. It was perfectly sweet, though the fat is fometimes liable to become flightly rancid, on exposure to the air; and it is therefore ufually kept in close boxes, till it is wanted for use. I was accustomed to eat heartily of the meat thus prepared, without any further dreffing, and at length grew fond of it; though I could not possibly furmount the prejudice I felt against that which was recently killed and

"My Tibet friends, however, gave an uniform and decided preference to the undressed crude meat; and though I listened to their praises of it in this state with a desire to become a profe-

lyte

lyfe to their opinion, yet I was compelled to yield to the force of early Their dried meat, though prejudice. it had not been subjected to the action of heat, or of fire, yet had not to the eye the appearance of being raw, but refembled in colour that which has been well boiled. It had been deprived of all ruddiness, by the intense cold. It is not easily cut across, though it admits readily of being broken, or stripped in shreds, in the direction of the fibres, which are always diffinctly marked, and easily separable: every muscle is completely enveloped in its own fac.

"Among the valuable and useful animals of Tibet, their breed of sheep merits a diffinguished rank. flocks are numerous; and upon them their chief reliance is placed for prefent support, as well as for their winter food. A peculiar species seems indigenous to this climate, marked almost invariably by black heads and legs. They are of a fmall fize: their wool is foft, and their flesh, almost the only animal food eaten in Tibet, is, in my opinion, the finest mutton

in the world.

"They are fed without distinction, wherever sufficient pasture is to be found, but principally upon the short herbage peculiar to the fides of eminences and bleak exposed plains .-They are occasionally employed as beafts of burden; and I have feen numerous flocks of them in motion, laden with falt and grain, each carrying from twelve to twenty pounds. They are the bearers of their own coats to the best market, where it is usually fabricated into a narrow cloth refembling frieze, or a thick coarfe blanket. When flaughtered, their fkins are most commonly cured with the wool on, and form a most excellent winter garment for the peafant and the traveller.

"The fkins of lambs are cured also with the wool on, and conflitute a vahuable article of traffic. In order to obtain the skin in its highest state of excellency, the dam is fometimes killed before her time of yeaning; a eruel precaution, which fecures, however, a filky foftness to the fleece, and stamps a very high price upon it in this region, where the merit of good furs is well ascertained. ferves particularly for lining vefts, and is in equal estimation all over Tar-

tary; it bears a very high price also in China: but powerful as the temptation is, I conclude from this circumstance that the practice is not very

frequently adopted.

"The dryne's of the atmosphere at this feafon, in Tibet, I thought very remarkable; it had an effect refembling that of the scorching winds which prevail, and blow over the fandy foil of Hindostan, or along the thores of Coromandel. Vegetation is dried to brittleness, and every plant may be rubbed between the fingers into duft.

" Hence the inhabitants have been compelled to adopt the precaution of covering their columns, the carved decorations of their capitals, and even their doors, with a coat of coarle cotton cloth, which feems, in some degree, to prevent wood-work from being rent in funder. The few articles of wood, trunks, and boxes, which I had with me, would often startle us in the dead of night with a report as loud as that of musquetry. This continued, without intermission. till the glue had entirely quitted its hold, and no longer kept the joints together, which had been previously foftened by the humidity of Bengal, fo that they were now ready to fall in pieces, As far as I could judge, timber, in this climate, seemed subject to no other injury from time; but was equally exempt from the filent depredations of decay, and the more active violence of any species of destructive vermin," P. 300.

ART OF PRINTING.

" IT is afferted, that the art of printing has, from a very remote age, been practifed in Tibet, though fimited in its use, as far as I could learn, by the powerful influence of fuperflition. It has hitherto remained appropriated principally to facred works, and to the fervice of learning and religion. Copies on these recondite subjects are multiplied, when required, not by the aid of moveable types, but by means of fet forms, having the subjects of their works carved with appropriate embellifiments on blocks of wood, with which they impress their matter upon thin narrow flips of paper, fabricated among themselves from the fibrous root of a small shrub, and the leaf bears

the impression of the characters defigned for it on each side. The leaves of a book, when they are completed, are loosely put together, placed upon each other, and enclosed between two equal slips of wood as covers.

" The fouthern Indians, who dwell along the margin of the fea, and never, I believe, possessed the art of printing, engrave their works upon the recent leaf of the palmira tree *, which, growing at the extremity of a long footstalk, is naturally formed in narrow folds, like a half-extended fan, and is eafily divided into fegments, about two inches in width. In correspondence to the purpose required, the fairest parts of the leaf are felected, and uniformly shaped by means of a sharp knife. On either side of these narrow slips, letters are traced or engraven, by means of a firong feel ftylus, which makes an indelible impression; though sometimes, to render the writing more distinctly legible, the traces of the point are lightly powdered by the dust collected from the fume of their midnight lamps. This simple method of transmitting records to future times, is practifed in those countries alone in which the palm-tree thrives. The leaf must be used while fresh; fibrous substance seems indestructible by vermin." P. 322.

(To be concluded in our next.)

LII. Drake's Literary Hours. (Continued from p. 229.)

ON THE DARK AGES OF CHRISTIAN EUROPE.

"UPON the demolition of the western empire, in the fixth century of the Christian era, its rude and untutored conquerors, hurrying over the most fertile parts of Europe, ignorant of letters, and altogether addicted to the love and exercise of arms, soon utterly neglected whatever remained of the taste, of the literature and elegance of the Romans; and to cut off all resource, all speedy probability of dispelling so dreadful a gloom, the Arabians, in the course of a few years after this event, head-

ed by the daring and enthusiastic Mahomet, rushed from their savage deferts to ensorce the precepts of his religion, and, under his immediate successors, rashly dared to consume the invaluable library of Alexandria, the rich deposit of whatever the best and wifest of the ancient world had been amassing for ages.

"Thus, within the space of a hundred years, every vestige of human learning was nearly destroyed, and a barbaric ignorance, which attained its height during the eighth, ninth, and tenth centuries, degraded Europe. In these latter periods, with one exception or two, every species of tyranny which could deform humanity, and every superstition which could debase the light of human reason, univerfally prevailed; and from Christianity mingled with barbarism, the rights of the priesthood with those of the empire, the prerogative of the fovereign with that of the nobility, fuch anarchy and confusion arose, as altogether impeded the diffusion of letters. Among the clergy also, where literature more especially ought to have been cherished, an ignorance the most excessive was to be found, and it is not uncommon to discover in the deeds of a synod, a fentence like the following:-As my lord the bishop cannot write himself, at his request I have sub-scribed.' Even Charlemagne, that far-famed monarch, the theme of minstrels, and the hero of romance, was unable to write his own name, and forty-five years of his life elapfed ere he attempted any progress in literature.

" What materially contributed to quench the last glimmerings of philofophy and fcience, was the extreme fearcity of books; in this island what libraries had been left by the Romans were destroyed by the ravages of the Picts and Saxons, and the fearch for, and the purchase of them upon the continent, were attended with great fatigue and enormous expense. In the year 690 King Alfred gave an eftate of eight hides, or as much land as eight ploughs could labour, to Benedict Biscop, founder of the monaltery of Weremouth, in Northumberland, for a fingle volume on cofmography; and at Rome their value was equally extravagant. In France likewife, Louis the Eleventh was obliged to deposit a considerable quantity of plate, and to get one of his nobility to join with him in a bond, under a high penalty, to restore it, before he could procure the loan of one volume which may now be purchased for a few shillings. Independent, however, of the difficulty in acquiring manuscripts, not the least defire or inclination for findy prevailed in these unhappy periods. In the ancient capital of the world itself, the lamp of science was expiring, and the plainest rules of grammar, the first rudiments of letters, even among those who pretended to extraordinary information, were The vilest wretches that ever difgraced humanity filled the Papal throne during the tenth century, alike ignorant of literature as of moral rectitude. O miserable Rome! exclaims a contemporary writer, 'thou · that formerly didth hold out fo many great and glorious luminaries to our ancestors, into what prodigious darke ness art thou now fallen, which will render thee infamous to all succeed-'ing ages.' In France, in the eighth century, Charlemagne could not find a fingle teacher of the liberal arts, nor did the improve in this refpect during the two fucceeding ages, and in Chriftian Spain they were compelled to iffue canons against ordaining men read nor fing plalms. Three or four beautiful lights, however, in this gloomy and dark-shaded picture should not be omitted; Bede, Alcuin, and Charlemagne, in the eighth, and Alfred in the ninth century, were poffessed of extraordinary genius; men whom history has delighted to hold up to our admiration, whom it has embalmed with grateful praise, and whole abilities, as brilliant as they were folid, burst through that cloud of ignorance with a splendour that dazzled, though they failed to inform, the understandings of their contemporaries. They were, in fact, but as meteors that flash on the furrounding gloom, are gazed at for a moment with flupid wonder, and are then loft in the darkness of returning night. The death of Beda,' fays William of Malmibury, " was fatal to learning, and particularly to history; infomuch that it may be faid, that al- and the nobler faculties of the mind

· most all knowledge of past events was buried in the fame grave with · him, and hath continued in that condition even to our times.'- At ' my accession to the throne' (A. D. 871), observes Alfred, 'all knowledge · and learning were extinguished in the English nation; infomuch that there were very few to the fouth of the Humber who understood the common prayers of the church, or were · capable of translating a fingle fentence of Latin into English; but to the fourth of the Thames, I cannot recollect fo much as one who could do this.' After the death of this incomparable man, the torch of science, which he had taken fo much pains to relumine, was totally extinguithed, and the demon of ignorance and superstition spread her dreadful pall over the barbarous fons of prostrate Europe. We now enter, complains Baronius, on the hiftory of an age, which, for its barbarifm ' and wickedness, may be called the ' age of iron; for its dulness and ftupidity, the age of lead; and for its blindness and ignorance, the age of darknefs.' - ' The tenth century,' favs Genebrard, ' is commonly and ' justly called the unhappy age; for it was almost quite destitute of men of genius and learning, had few great princes or good prelates, and hardly any thing was performed in it that merits the attention of pof-

"The dreadful devastation of the Danes previous to the reign of, and after the demise of Alfred, and the original contempt of the ancient Germans and Saxons for literature, undoubtedly operated confiderably in producing this deplorable defalcation of knowledge; but the degraded state of Christianity, which consisted merely in the accumulation of relics, the performance of pilgrimage to Rome, and in monastic seclusion, accompanied with the most stupid credulity, was of itself sufficient to annihilate all energy of mind, for, by depreciating science, and requiring implicit faith in the most wretched and absurd doctrines and legends, all discrimination of truth and record, all the fources of history and philosophy, all power and wish to detect error, however grofs, were effectually destroyed,

laid waste and crushed beneath the iron hand of ecclesiastic tyranny." Vol. i.

"There were no crimes in these periods, however enormous, but what might be expiated by purchased abfolutions, or by pilgrimages; murders and pollutions of all kinds were thus absolved, and few thought themselves fafe, or fecure of the joys of heaven, without having paid their devotions at the shrines of St. Peter and St. Paul; · for fuch reasons, lays Dr. Henry, kings, queens, nobles, prelates, monks, nuns, faints, and finners, · wife men and fools, were impatient . to undertake these religious journies; and all the roads between Rome and · England were conflantly crowded with English pilgrims. It appears, · indeed, that the morals of these su-· perfitious vagabonds, especially of the ladies, were not much improved by these peregrinations. Boniface, · archbishop of Mentz, an Englishman, in a letter which he wrote to Cuth-· bert archbishop of Canterbury, A.D. * 745, exhorts him-" to prevent fuch · great numbers of English nuns from going on pilgrimages to Rome; be-· cause so many of them lose their vir-* tue before they return, that there is · hardly a city or town in Lombardy, · France, or Gaul, in which there are · not fome English women who live by * proffitution, to the great reproach of * your church." It is not impossible, that these ladies, being certain of a pleanary remission of all their fins when · they arrived at their journey's end, · might think there could be no great haim in adding a little to the number of them by the way .' Many of these pilgrimages were undertaken for the fake of procuring relics, which in this period were confidered of ineffimable value, enclosed in caskers of gold and filver, and bestowed on their happy poffessor a title to the veneration and almost worship of his contemporaries; fcarce any crime was fhrunk from, provided it led to the acquifition of these precious articles, and a rotten bone, or a rufty nail, the thumb of an apostle, or a lock of the hair of Mary the mother of God, obtained by fallehood, theft, or robbery, were held dear as existence itself, and thought capable of absolving the purloiner from all enormity in the means made use of

for their acquirement. Nothing, in fact, can be niore aftonishing than the credulity and infatuation of Christian Europe during these dark ages; the most monstrous and absurd tales of apparitions and miracles, of enchant. ments and visions, were firmly confided in; and of these a large collection might be made; a fingular, though perhaps not an unentertaining monn. ment of the strange folly of our ancestors. One of the most respectable of our ancient historians, William of Malmsbury, has recorded the follow. · ing miracle as an indifputable fact, re. lated in the very few words, he fays, of the perfons on whom it was wrought, and of which a formal deed, relating the particulars, and atteffing the truth. was drawn up and fubfcribed by Bishop Peregrine, the successor of Hubert .-I Ethelbert, a finner, will give a true relation of what happened to me on the day before Christmas, A. D. · 1012, in a certain village where there · was a church dedicated to St. Magnus the Martyr, that all men may know the danger of difobeying the commands of a prieft. Fifteen young women, and eighteen young men, of which I was one, were dancing and finging in the church-yard, when one Robert, a prieft, was performing mass in the church, who sent us a civil meffage, entreating us to defift from our diversion, because we disturbed his devotion by our noise. But we impioufly difregarded his request; upon which the holy man, inflamed with anger, prayed to God and St. Magnus, that we might continue dancing and finging a whole ' year without intermission. His prayers were heard. A young man, the fon of a prieft, named John, took his fifter, who was finging with us, by the hand, and her arm dropped from her body without one drop of blood following. But, notwithstanding this difaster, she continued to dance and fing with us a whole year. ' During all that time we felt no inconveniency from rain, cold, heat, huneger, thirst, or weariness, and neither our shoes nor our clothes wore out. Whenever it began to rain, a ' magnificent house was erected over us by the power of the Almighty. · By our continual dancing we wore the earth fo much, that by degrees

"This passion for the marvellous in religon, though mingled with more wildness of fancy and poetical invention, continued fome centuries; for Giraldus Cambrensis, one of the most learned and intelligent' authors of the twelfth century, 'tells us of a devil who acted a confiderable time as a gentleman's butler with great prudence and probity; and of another who was a very diligent and learned clergyman, and a mighty favourite of his archbishop. This last clerical 'devil was, it feems, an excellent · historian, and used to divert the archbishop with telling him old stories. One day when he was entertaining the archbishop with a relation of ancient histories and furprising events, the conversation happened to turn on the incarnation of our Saviour. " Before the incarnation," faid our hiftorian, "the devils had great power over mankind; but after that event their · power was much diminished, and they were obliged to fly. Some of them threw themselves into the sea; fome concealed themselves in hollow trees, or in the clefts of rocks; and · I myfelf plunged into a certain fountain." As foon as he had faid this, finding that he had discovered his fecret, his face was covered with blushes, he went out of the room, and was no more feen.' The fame historian, likewise, in his topography of Ireland, relates, that 'when Sr. Kewen was one day praying with both his hands held up to heaven, out of the window of his chamber, a fwallow laid an egg in one of them; and fuch was the patience and good Vol. IV.—No. XXXVII.

nature of the faint, that he neither drew in nor that his hand till the ' fwallow had built her neft, laid all her eggs, and harched her young. · To preserve the remembrance of this fact, every flatute of St. Kewen in Ireland hath a fwallow in one of its

hands,

" Excessive credulity is ever the companion of ignorance; and the specimens I have given, and a multirude of others ftill more abfurd might be adduced, fufficiently prove, that a love of the marvellous the most gross and flupid, unmingled with those fallies of fancy and mythology, that spirit of invention and fabling, which, in fucceeding centuries, engage alike the imagination of the poet, and the refearch of the philosopher, was the unhappy characteristic of this gloomy era; to fuch an incredible length indeed were fuperflition and folly fometimes carried, that in feveral churches, efpecially at Rouen, a ceremony was performed called the feast of the ass, at which the ass, richly dressed, was placed before the altar, and the infatuated people fung before him the following exquisite anthem: 'Eh, eh, eh, fire Ane! eh, eh, eh, fire Ane!

" As curious as they were credulous, the inhabitants of Europe at this time, and of the northern nations in particular, supported a train of magicians, diviners, and fortune-tellers, to whom they reforted upon any emergency, anxious either to avert prefent misfortune, or to penetrate into futurity. Many of thefe were old women, perfonages of high estimation among the Anglo-Saxons and Danes, and in whom they conceived a portion of the divi-nity to reside. These venerable and withered hags travelled with much state and with a large retinue of fervants; and those princes and nobles who invited them to their houses for the purpose of exercising their profesfion, treated them with the utmost deference and attention. Bartholia has given a genuine and very curious description of an interview of this kind, which, as it throws much light upon the manners of this period, and is indeed a fingular picture of their fimplicity, curiofity, and credulity, I shall venture to transcribe. 'There was in the fame country an old woman named Thorbiorga, the only furvivor of nine fifters, fortune-tellers,

who was very famous for her knoweledge of futurity, and frequented public entertainments for the exercise of her art when the was invited. Earl Thorchill, who had the greatest authority in that country, and was ' most desirous to know when the fa-' mine and fickness, which then raged, would come to an end, fent meisengers to invite Thorbiorga to his house, after he had made all the preparations which were usual for the * reception of fuch an honourable gueft. 'In particular, a feat was prepared for the prophetels, raifed some steps above the other feats, and covered with a cushion stuffed with hen's fea-thers. When she arrived on an even-4 ing conducted by the messengers, she was dreffed in a gown of green cloth, buttoned from top to bottom; had a firing of glass beads about her neck, and her head covered with the skin of a black lamb, lined with the skin of a white cat: her shoes were made of a calf's fkin, with the hair on it, tied with thongs, and fastened with brass buttons: on her hands she had a pair of gloves of a white cat's fkin, with the fur inward : about her waift fhe wore a Hunlandic girdle, at which hung a bag, containing her magical 4 instruments; and she supported her · feeble limbs by leaning on a staff adorned with many knobs of brais. As foon as the entered the hall, the whole company arose, as it became them, and faluted her in the most respectful manner; which she returned as the thought proper. Earl 'Thorchill then advanced, and taking her by the hand, conducted her to the feat prepared for her. · fome time fpent in conversation, a * table was fet before her covered with many diffies; but fhe ate only of a pottage of goat's milk, and of a dith which confifted of the hearts of various animals. When the table was removed, Thorchill humbly approached the prophetels, and asked her what she thought of his house, and of his family; and when the would be pleafed to tell them what they defired to know. To this the replied, that she would tell them nothing that evening, but would fatisfy them fully next day. Accordingly,

on the day after, when she had put all her implements of divination in proper order, she commanded a maid. en, named Godreda, to fing the ma. gical fong called Vardlokur; which the did with to clear and fweet a voice, that the whole company were ravished with her music, and none so much as the prophetes; who cried out, "Now I know many thing sconcerning this famine and fickness which I did not know before. This famine will be of fhort continuance, and plenty will return with the next feafon, which will be favourable; and the fickness also will shortly fly away, As for you, my lovely maid Godreda, you shall be married to a noble. man of the highest rank, and become the happy mother of a numerous and flourishing family." After this, the whole company approached the prophetes one by one, and asked her what questions they pleased, and she told them every thing that they de-" fired to know "."

" It will readily be imagined that in an age fo incapable of afcertaining truth of any kind, the sciences would receive little or no cultivation; in fhort, it may with propriety be faid, they had none; their grammar, rhe-toric, and logic were despicable in the extreme, and in the place of aftronomy, aftrology, divination, and witchcraft crowd upon our view. Of geography and chronology they had no idea; for their monks and pilgrims, their only travellers, journeyed merely in pursuit of relics, and had no conception of ascertaining the polition of the countries through which they paffed. Indeed after the fall of the Ruman empire the connexion between its former provinces was totally diffolved: fevered among a number of hostile and illiterate barbarians, the geography of Europe was loft, and the inhabitants of one province were perfeetly ignorant of the fituation and extent of its immediate neighbour: intercourse of all kinds among these nations completely fubfided, and the diffricts of the western world were to each other as terra incognita." Vol. ii. p. 268.

LIII.

A WATER-SPOUT.

"AT five o'clock in the afternoon of the 8th (Aug.) we were under the equator, in the longitude of 135° 40' east, when we faw, at the distance of one third of a myriameter, a very confiderable water-fpout forming to the fouth-west. Although the air was perfectly still around us, the fea was agitated and frothy at the fpot where the water-spout originated. very fmall cloud was stationary at a few decimeters above the place whence it rose. This water-spout had the form of two very elongated cones, united at their fummit; the base of one of their cones rested on the sea, that of the other was loft in a very thick cloud.

"The clouds feemed to me agitated by a whirlwind, which, collecting a great quantity of water, was pouring down in torrents: perhaps all waterspouts are formed in this manner. If, as many natural philosophers affert, a water-spout sucked up the water of the fea in a great volume, this water ought to be as falt at the time of its fall, as at the moment of its elevation, which by no means accords with experience: a person worthy of credit, who faw two fall on board a ship, affured me, that they had constantly discharged fresh water. In the contrary supposition, this phenomenon is easy to be explained." Vol. i. p. 294.

A VISIT TO THE GOVERNOR OF AMBOYNA.

"IT was of no fmall importance to the naturalists to be known to the Governor of Amboyna, that they might have every opportunity of profecuting the researches which constituted the object of their mission: it was, no doubt, through mere forgetfulnefs, that the admiral had fuffered us to remain ignorant of the hour of the first visit which he had paid him. I requested that he would have the goodness to introduce us, and we set off about half past ten o'clock to go to the overnor's. M. Bourguellés and M. Van Smiehl readily undertook to act as our interpreters.

"M. Van Smiehl was a German baron, lately arrived in the island. He was at prefent, as he told us, only aspiring to become one of the Com-pany's servants. We congratulated ourselves in the sequel, that he had not yet much influence over the governor: for he had endeavoured to perfuade him that the regency of Batavia would not approve of permission being given to our thips to make any itay at Amboyna. And yet, the Baron knew very well, that a year before, two small English vessels, dispatched from Bombay for the Pelew Islands, had been received here without the fmallest difficulty. They had, at first, put into Bouro, where, not having found provisions, they had come and taken them in at Amboyna; and these veffels were very far from having the fame claim as we: perhaps the unexpected appearance of foreign thips in this road, for two fuccessive years, required that the governor should take every fort of precaution, in order to cover his responsibility: he received us in the best possible manner. We were really concerned that he had, on our account, put on his full drefs; he was almost suffocated with heat under a very heavy black velvet coat: fuch a drefs is extremely inconvenient near the line; but the Dutch governors wear it because it is a prerogative of their office.

" Some refreshments were served up. I wished only for water, and I poured out some of that which appeared to me the clearest; but its falt taste induced me to believe that the fervants had made a mistake, and presented me with fome medicinal water. was Seltzer water, which the Dutch are here in the habit of drinking, as a very agreeable liquor; it costs them as dear as the best Rhenish wine. tainly our repugnance for this beverage was not foreseen; however, it might well have been supposed, that, under a burning fky, after a long privation of fresh meat, we should not have much inclination to drink falt water.

"The admiral proposed to introduce us also to the members of the council, and we accepted his offer: they all received us in a very handsome manner.

"As we were to ftay at Amboyna a month at least, I was obliged to have brought on shore, to the place where we were to lodge, a great many artification.

Llz

recellary

A VISIT TO

necessary for the preparation of the different productions which I purposed collecting in the island. The other naturalists and I having agreed to live in the fame house, we had had it set in order, and our baggage was already arrived there, when, to our great aftonishment, we found it occupied by fome officers belonging to the two ships, who, however, were not ignorant that we had hired it: the man who had the key of it had thought that he was delivering it to us when he gave it to them. This unhandsome trick, of which we should not have supposed them capable, diverted them exceedingly; but it was eafy for us to find another lodging." Vol. i. p. 314.

"The Dutch at Amboyna are in the habit of bathing every three or four days. On those days they carefully avoid exposing themselves to the great heat, which lasts from eleven o'clock in the morning till three in the afternoon. It is even very uncommon for them to go out on other days during this time. As for us, we had not leifure to take fuch precautions; and hence two of the naturalists were attacked by very violent diforders.

" We endeavoured feveral times to penetrate into the middle of the large plantations of fago-palms; but the waters which wash the foot of these palms frequently forced us to return as we went: this tree, which is fo conducive to the nourishment of man, forms part of the wealth of the island.

" The beach, at low water, was covered in many places with a great number of crabs, of the species called cancer woçans. They had then quitted the holes which they had dug in the rather folid ground. This fingular species of animal, one of whose claws is fometimes bigger than the body, often becomes the prey of the birds. I am of opinion, that the facility with which it sheds its claws is the reason why one of them is almost always much larger than the other.

"A little excursion which we made to the fouth of the town, near the quarter inhabited by Europeans, procured us a fight of the tomb of Rumphius. The simplicity of this monument reminded us of the simplicity of manners of this able observer of nature: his tomb was surrounded by the pretty theub known by the name of pana fruticofum.

"We faw in the possession of the natives of the island the beautiful lory of the Philippines: however, they do not get it from so great a distance, but from fome iflands not far to the eastward of Amboyna, and principally from the Arow Islands. They also had another lory, which is found in the forests of Amboyna, and which differs from the former by its colours being less bright and much less shaded; almost all these parrots can repeat a few words of the Malay language." Vol. i. p. 318.

MATAI, WHICH PRESERVES THE HARVEST FROM PILLAGE.

"I WISHED to cut some branches of different plants, cultivated in a garden belonging to one of the natives of the island; but those who accompanied us apprized us of the danger to which they thought I should expose myfelf: they showed me a fmall shed, and repeated several times, with an air of respect mingled with fear, the word matai, before our interpreter came to explain to us, that by this term, which fignifies a dead body, they meant to defignate the former possessor of this garden, who had been buried under the little fhed that we faw, These inhabitants have a persuasion that he foul of the deceased wanders round those places, watching to preferve their produce for the present proprietor: they believe, that any other person who should possess himself of it would die within the year. This opinion is fo generally diffused, that it feldom happens that a native, in fuch circumftances, ventures to touch the property of another; and the matai is a bugbear which almost always secures the crop to the lawful possessor." Val.i. p. 328.

COAST OF NEW HOLLAND-CAPE DIEMEN.

January 4, 1793.

" AT noon we were in latitude 31° 52' fouth, and longitude 129° 10' east, and we saw the land from east to north by west, being a myriameter from the nearest shore.

"As foon as the hoat was hoisted in, we made fail close hauled on the larboard tack, with the wind at east fouth-east, and stood on towards Cape Diemen, of the al lory hey do ce, but ie eastcipally y alfo und in which olours haded; t a few

titude 90 10 east to meter oifted

CAPE

n the it east Cape emen, Diemen, thus taking our leave of an extremely barren coast, upwards of a hundred and fixty myriameters of which we had just ranged along, generally in a direction from west by south to east by north. Fifteen months before us, Van ouver, alike thwarted by eatterly winds, had been forced to abandon it, after he had been able to examine it only for the extent of about feventy my iameters *

" Before we touched on this coaft. we did not forefee that we should here fo frequently meet with tempestuous winds, especially at this feafon, which should be that of the summer in these feas, the fun having been now for upwards of two months in the fouthern hemitphere. May not this impetuofity of the wind be occasioned by the prodigious d'fference that exists between the trifling degree of the heat of the atmosphere at fea, and the ardent rays of the fun, which were concentrated by the burning fands of the main land?

"The currents that were perceptible along this coaft, always followed the direction of the winds.

"The Espérance was in still greater distress than we were; besides, that ship had met with several accidents at our last anchorage: it required an excellent shelter to execute all the repairs of which the stood in need.

"At four o'clock we loft fight of the land from the mast head, and, at the fame moment, we had thirty fathoms water, with a bottom of fine fand, mixed with broken shells and lytophites. We continued founding every two hours, and, at each caft of the lead, we found that the depth of water increased from two fathoms to two and a half: it had conftantly augmented in an almost imperceptible manner, in proportion as we receded from the coast, which, on the 5th, at five o'clock in the afternoon, was at the distance of twenty myriameters; then we got foundings in fixty-one fathoms and a half, over a bottom of pretty fine fand mixed with gravel, and from that time we could not ftrike

ground, although we founded repeat-edly. This flow increase of the depth of the fea near this coast, showing that the lands under water fink by a gentle declivity, made me prefume that those which advance into the interior of the island rife by an acclivity also very gentle, fo that its high mountains are too far distant to be perceived from the shore.

"The day before we had been carried twenty-three miles to the westward of our reckoning, and, in the course of the 7th, twenty miles in the fame direction. At noon we were in latitude 35° 30' fouth. The rapidity with which these currents set to the westward, depends, perhaps, on some channel which separates the lands of New Holland from those of Cape Diemen, between Point Hicks and Furneaux's Islands. Captain Cook, when he explored the east part of New Holland, faw no land in this fpace, the extent of which is about twenty myriameters, and thought that he was at the entrance of a great gulf. Perhaps in that part of the coast begins the opening of a channel, which, after having formed different finuofities, runs to the westward, and there forms another opening in the same latitude as that in which we experienced fuch strong currents +

"We did not meet with westerly winds till we reached the latitude of 40° fouth; they carried us to Cape Diemen, varying from fouth-west to north-west." Vol. i. p. 456.

NEW HOLLAND-SINGULAR ORGA-NIZATION OF THE BARK OF TREES.

" SEVERAL species of leptospermum had thriven fo well in this humid foil, that they were become very tall trees, while elsewhere I had found them, only of the fize of fmall fhrubs. Some were here upwards of thirty meters high, although the body of the tree was not more than two decimeter's thick: one of these species was

remarkable

" See Vancouver's Voyage, vol. i. page 42 and following." † "This observation affords a striking proof of the justness of M. Labil-lardiere's discernment; for it has recently been ascertained that the part of New Holland known by the name of Van Diemen's Land, is, in fact, a detached island; an English vessel having entered the eastern mouth of this newly-discovered strait, between the 38th and 39th degrees of south latitude, and returned round the South Cape to Port Jackson. T."

remarkable on account of its bark, which was about three centimeters thick, and composed of a great number of sheets, situated one upon the other, very easy to separate, and as thin as the finest China paper. This singular organization of bark is met with only in New Holland; it is much the same in the eucalyptus resinifera: I had also observed it on the southwest coast of this same country in two large trees, one of which belongs to the family of the protest, and the other to that of the myrti." Vol. ii. p. 6.

NEW SPECIES OF SEA HEDGE-HOG.

" I HAPPENED to be present several times during the day, when they were hauling the feine; and I always observed some new species of fea hedge-hog. I admired the promp-titude with which these little sishes, by fwelling themfelves, as foon as they were handled, erected the prickles with which they are covered; but they let them fall, and kept them, throughout their whole length, drawn in close to their skin, as soon as they thought themselves out of danger. From this observation, it is evident, that the attitude which is given to fishes of this genus, by swelling them as much as possible, and in which they are exhibited in cabinets of natural history, is not that which is most common to them." Vol. ii. p. 78.

TONGATABOO -- QUEEN TINEH.

" QUITE close to the market, whither the natives came and brought us their commodities, we perceived a woman of extraordinary embonpoint, at least fifty years of age, round whom the natives formed a very numerous circle: fome paid her, in our presence, marks of respect, by taking her right foot, and placing it on their head, after having made a low bow; others came and touched with their right hand the fole of her right foot. Several chiefs, whom we knew, also paid her other marks of deference. We were informed that she was Queen Tineh. Her hair, cut about two thirds of a decimeter in length, was, as well as part of her forehead, covered with a reddish powder.

"After having expressed a wish islanders, who to go on board of the Recherche, to fee the commander of the expedition, our company.

ske asked us to accompany her, and immediately embarked to go thither with part of her court. She gave several very handsome mats, a hog, and some yams, to Admiral D'Entrecasteaux, who made her a present of different pieces of cloths, on which she seemed to set a great value.

"Withing to know what fenfations the founds of the voice, accompanied by the violin and the German guitar, would produce on these people, we remarked, with pleasure, that this music was agreeable to them; but a few tunes played on a bird-organ, obtained plaudits still more expressive.

"Queen Tineh, wishing not to be behindhand with us, ordered some young girls of her fuite to sing.— One of the prettiest immediately rose up, and soon gained our applause; yet she sang nothing but

'Apou lelley; apou lelley; apou lelley; apou lelley;

which she repeated for at least half an hour; but the displayed so much grace in the motions with which she accompanied this air, that we were forry the left off fo foon. Her arms were brought forward, one after the other, and followed the time, while the raifed her feet, standing, however, always in the fame place: each divifion of the time was marked with the fore-finger; this the struck on the middle-finger, which she kept extended by the thumb; and fometimes the thumb was carried against the middle-finger and the fore-finger. The charms of these motions were particularly owing to the beautiful shape of the hands and arms, so common among these people, and of which this young girl afforded a very striking example. Two other young girls then repeated the fame tune, which they fang in parts, the one constantly a fifth under the other, and feveral men rofe up to dance to the found of their melodious voices: they beat time, by motions analogous to those of the young girls, first with their feet, and often by putting one of their hands on the opposite arm.

"We took the words of this tune, apou lelley (agreeable evening), for a compliment on the part of these islanders, who were congratulating themselves on spending the evening in our company.

" The

"The queen tafted the different diffes which we offered her; but she gave a decided preference to bananas preserved in sugar. Our steward stood behind her, and was waiting for the moment to take away; but she saved him the trouble, by keeping for herself the plate and the napkin.

"Tineh was very tenacious of the honours which the chiefs did not dare to refuse her when they met her; accordingly some avoided being in her presence. Feenou, and the king's brother Toobou, were on board, and had just promised to stay and dine with us when she came alongside; they immediately urged us not to let her come upon the quarter-deck: however, the foon made her appearance there, and we faw thefe two chiefs precipitately retreat into their canoes; for they would have been obliged, as several of the inhabitants affured us, to come and take hold of her right foot, and very respectfully incline their heads towards it, as an acknowledgment of their inferiority. This queen informed us, with an air of fatisfaction, that King Toobou even was compelled to pay her these marks of respect, because it was from her that he held his dignity.

"After having told us that the intended to live in the island of Pangaïmatoo as long as we should stay in this roadstead, she invited the admiral to take up his residence on shore, and to sleep in her habitation. I do not imagine that this old queen had any other view than to procure him an abode more agreeable and more falubrious than that of the ship; but the admiral had no opportunity of appreciating justly the motive of these obliging offers, for he did not accept the invitation.

"One of our failors held in his hand a piece of boiled falt pork, which Feogo, one of Tineh's ladies in waiting, feemed to long to tafte: he offered it to her, and she received it with gratitude; but, not daring to take the liberty to eat in the presence of the queen, the latter had the condescension to go and sit down about twelve yards farther off, in order that her attendant might be at a difference from her; but before she quirted her place, she received from this young girl the same marks of respect

"The queen tafted the different as the other natives had already paid thes which we offered her; but the her in our prefence.

"Two hours before funfet Tineh expressed a wish to return to the island of Pangaimatoo; and shortly after departed in our barge, with part of her suite." Vol. ii. p. 125.

EXTRACTS.

THE INNER TEMPLE KNIGHTS

in IN the time of Henry II. the knights templars had a house in Holborn, in the vicinity of Southampton Buildings, from whence they removed, for convenience, to another habitation, epposite to a breet then called New Street, now Chancery Lane.

Stowe, took place about the year 3118 in the following manner: 'Certain noblemen horsemen, religiously

bent, bound themselves by vow, in the hands of the Patriarch of Jerusalem, to serve Christ, after the manner of regular canon, in chastity and obedience; and to renounce their own proper wills for ever. The strift of which order was Hugh Paga-

nus (i. e. Pain) and Geffrey de S.
Aludomare. They having no certain habitation, Baldwin, King of
Jerusalem, granted unto them a
dwelling-place in his palace, by the
Temple. Their first profession was
to protect the pilgrims coming to visit
the sepulchre, and to guard the highways. About ten years after their
first establishmen, they wore a white
habit, by order of Honorius the Second, then pope, and afterwards, in
the time of Pope Eugenius, they bare
crosses of red cloth on their uppermost garments. Many noblemen, in
all parts of Christendom, became
brethren of this order, and built tem-

ples in most of the cities and great towns. In England this was their chief house, though they had many

other temples in Cambridge, Bristol.

Canterbury, Dover, Warwick, and other places. This Temple in London

was often made use of as a storehouse

for treasures for such as, judged them-

felves infecure in other places.

"Thefe treasures, however, we find were not so facred here as the owners imagined, for Matthew Paris relates, that in the year 1230 Hubert de Burgh, Barl of Kent, being a prisoner in the Tower, the king was informed he had much treasure laid up in this new temple, under the custody of the knights templars; and the master of the Temple being examined therein, and confessing there were monies, &c. delivered into his charge, the king sent his treasurer and justicier of the

exchequer to the faid Hobert, Earl of Kent, to require him to renign his reafure into his hands. The money was faithfully told, and, together with veffels of gold and filver, and many precious flones of confiderable value, of which an inventory was taken, was laid up in the treasury of the crown.

In the year 1245, the Nuncio of Pope Innocent refided in this Temple, and that pope commanded the bishops of England to carry to his nuncio 6000 marks, which was, however, prevented by the interdiction of

King Henry.

"In 1283 Edward I. taking with him one Robert Waleran, and others, came to the Temple, where calling for the keeper of the treasury-house, as if he intended to fee his mother's jewels, that were laid up there to be fafely kept, he entered into the house, breaking the coffers of certain perfons, that had likewife brought their money thither, and he took away from thence valuables to the amount of 1000%. About this period, the Templars became fo rich, that they were enabled to entertain the nobility, the foreign ambaffadors, and even the prince himfelf. Matthew Paris inveighs against them bitterly for their pride, which led them to disdain other orders, and rank themselves with the nobility, although their original poverty was fo abject, that they could afford only one horse to serve two of them; and Stowe fays, in token whereof, they grave on their feal ' two men riding on one horfe.

"In the reign of Edward II. in 1308, the Templars in England, as also in other parts of Christendom, were apprehended and committed to divers prisons, and in 1310 a provincial council was held at London against them, upon accusations of herefy and other crimes. They denied all the charges except one or two, and pleading guilty to these, they were condemned to perpetual penance in several monasteries, where they behaved themselves with modely and decorum. Philip le Bel, King of France, caused them to be condemned by a general council, and thus pro-

cured their overthrow.

"According to Fabian, Philip, having feized their possessions in France, applied them to his own use,

and.

and, not fatisfied with this spoil, he caused fixty of them to be publicly burnt in Paris.

" So enormous were the riches of this order at its diffolution, that it was found possessed of 16,000 manors."-P. 31.

MIDDLE TEMPLE-REGULATIONS IN DRESS, &c.

" IN the fourth year of the reign of Philip and Mary, it was ordered, that none of this fociety should thenceforth wear any great bryches in their hoses, made after the Dutch, Spanish, or Almon fashion; or lawnde upon their capps, or cut doublets, upon pain of three shillings and fourpence forfeiture for the first default, and the fecond time to be expelled the house: and in the 26th Elizabeth the following orders for apparel were made.

" 1. That no great ruff should be

" 3. Nor any facing of velvet in gownes, but by fuch as were of the bench.

" 4. That no gentleman should walk in the ffreets in their cloaks, but

" 5. That no hat, or long, or curl-

ed hayr be worn.

" 6. Nor any gownes, but fuch as

were of a fad colour. " 'In Charles I.'s reign many re-'gulations were made for the good government of the fociety of the 'Middle Temple, viz. that no foreigner or other, not of the focieties, ' shall be permitted to lodge there, that no common attorney or folicitor be admitted, no utter barrifter pub-· licly to practife at any bar at Westminster, till he have been three years 'at the bar; and that none be admitted to the bar under eight years con-'tinuance, and who have kept exercifes in the house, and at the inns of chancery, according to the orders of 'the house.'

"There are no lands nor revenues belonging to this house, to induce or encourage the fludent to fludy by means of a stipend or falary; which, fays an old writer quaintly on the fubject, ' is the occasion that many a good wit, for lack of exhibition, is compelled to give over and forfake study, before he have any perfyte know-Vol. IV.—No. XXXVII.

· ledge in the law, and to fall to practiling, and become a typler in the law. From the following remark From the following remark of the fame author, we may fairly prefume, that at the time of which he speaks, the inns of court were by no means calculated for the study of the law. The students, he observes, have for the most part their studies and places of learning, fo fet that they are much troubled with the noise of walking and communication of them that be no learners; and in term time they are fo unquieted by clyents, and fervants of clyents that refort to fuch as are attorneys and practifing, that the students may as quietly fludy in the open streets as in their studies. They likewise complain that they have no place to walk in, and talk and confer on their learnings, but in the church, which place all the term times hath in it no more quietness than the pervyle ' (purlieus) of Pawles, by occasion of the confluence of fuch as are fuiters. in the law'." P. 91.

LINCOLN'S INN FIELDS-SIR JOSEPH JEKYLL.

" FROM the terrace of the gardens (of Lincoln's Inn), we are prefented with a noble and spacious view of Lincoln's Inn Fields, one of the largest squares in Europe. In 1618 this fpot was, by a commission from the king, entrusted to the Lord Chancellor Bacon, the Earls of Worcester, Pembroke, Arundel, &c. In this commission it was stated, that the ground called Lincoln's Inn Fields was much planted round with dwelling-houses and lodgings of noblemen and gentlemen of quality; but, at the same time, it was deformed by cottages and mean buildings, encroachments on the fields, and nuisances to the neighbourhood. The commission was therefore to reform those grievances, and to frame and reduce those fields, called cup-fields and purfefields; both for sweetness, conformity, and comeliness, into such walks, partitions, or other plots, and in fuch fort, manner, and form, both for public health and pleasure, as by the faid Inigo Jones is, or shall be drawn, by way of map. Thus authorized, Inigo drew the ground-plot, and gave it the exact dimensions of one of the pyramids of Egypt. Lindfey House,

M m

on the west side, and most of the buildings in that row, were designed from the plans of this great artist; and here we cannot but regret, that the whole square was not finished by the same masterly hand. This was most probably occasioned by a jarring of interests, which too frequently occurs in this country on similar occasions; for it is no easy matter to unite the public sentiments for either ornament or convenience, where private pro-

perty is concerned.

" For many years after the death of inigo Jones, this place continued in a state of neglect and ruin; at prefent it is certainly refcued from any fuch difgrace, and prefents a grand difplay of national wealth, with no fmail degree of taffe in the application of it. Before Lincoln's Inn Fields was railed in, they used to break horses on this spot; and Sir Joseph Jekyll, about the year 1740, having been active in bringing a bill into Parliament to raise the price of gin, became very obnoxious to the poor; and, when walking one day in the fields, at the time of breaking in the horses, the populace threw him down and trampled on him; from which treatment his life was in great danger. I am informed, though I do not remember the circumstance, that in one of Hogarth's prints a low character is repretented as chalking upon a wall the letters Sir J. J. and drawing a gibbet under them; in allusion, perhaps, to the aversion of the abovementioned baronet to the favourite liquor of the inferior orders of fociety." P. 127.

ROLLS CHAPEL-PIETRO TORRE-

"THE present chapel of the Rolls is reported to be the work of Inigo Jones. It was begun in 1617, and finished at the expense of 2000s. It is small, and has attached to it a peculiar air of gloom and solemnity. The monument of John Yonge, L. L. D. who was appointed Master of the Rolls in 1510, and died in 1517, particularly deserves our notice. This figure rests on a sarcophagus, and is habited in a long red gown and a deep square cap. It is the work of Pietra Torregiani, a very eminent Florentine, who was brought into England by some merchants, and enter-

tained in the service of Henry VIII.; for whom he executed many works in marble, brais, &c. for which he received liberal prices.

"When I ard Orford fays, "he was 'placed, in his own country, in come' petition with Michael Angele," his merits are not to be quellioned and I think myfelf juffified in fays a mat the face of Dr. Yonge is to order, fully executed, I have no doubt of its being from a calt after his death. The head of our Saviour, and two cherubins, are introduced above, with all the fuperfittous zeal of the aroff; though, to keep on terms with Henry, we are told that he renounced his

"From England the artist visited Spain, and was employed on many works of genius; among others, in caving an image of the Virgin Mary; which, not having completed to his wish, he, in a fit of passion, broke to pieces. For the rashness of this act, he was accused of herefy, was thrown into the inquisition, tried, and condemned. The execution was, however, respited; but he became melancholy mad, and starved himself to death, at Seville, in 1522, in the fistieth year of his age.

"The prefent residence of the master of the Rolls was built at the expense of government." P. 205.

WESTMINSTER HALL.

"THE style of building here preferved is the true Gothic; or, rather, in the more modern phrase, the Saracenic. There is a prevalent massiveness in its appearance. This is to be imputed to a neglect of the buildings, or to an intentional mutilation of those parts of it that were their principal relief and ornament. This shameful negligence, in not preserving the original parts, is most conspicuous in the removal of the figures in the front; and in the concealment of them, by the erection of those nuisances, the cossee-houses, at the entrance.

"The Gothic points of the niches are still discernible over part of the Exchequer coffee-house; and the whole-length figures, in the niches beneath, we have great reason to believe are yet standing. In an ancient print, which we have seen, of this building, published before the coffee-houses were erected, the figures all

appeared

appeared perfect, and in course gave great relief to the general elevation. We cannot but fincerely regret the fad innovations that have been made along this whole range of buildings, by projections of fheds, porter-shops, and other excrescences of the meanest character; which, being here huddled promiscuously together, conceal from the public eye every vestige of antiquity, and deface the beauties of works that did honour to the age in which they were erected, and which should ever have been considered as facred relics of the labour and ingenuity of our ancestors. The front of the hall is greatly in a state of decay; but, it is to be hoped, will not much longer escape the attention due to fuch a specimen of ancient architecture and regal munificence.

"Of the grand Gothic niche, or recess, within the great arch at the entrance of the hall, we are concerned to remark that, by a peculiar negligence attending this once elegant part of the structure, the beautiful groined head is totally lost; and the small Gothic pillars, as well as those from which the arch or doorway springs, are in the last state of

ruin.

" On entering this noble hall, impressed as the mind of every one must be at its vast magnificence, we are naturally led to regret the neceffity there was, a few years fince, to raife the floor, or pavement, fix or feven feet, by which means the grand fymmetry of the building is loft; and an eye but little accustomed to just proportions, will, at the first glance, discern the want of height. This is difcern the want of height. reputed to be the largest room in Europe, unsupported by pillars. The roof is afferted by some to be constructed of Irish oak, which has a reputation over that of other countries, by possessing the peculiar property of relifting the worm. By others it is faid to have been built of chesnut

"The roof is supported by thirteen Gothic ribs, of a noble dimension, springing from the centre of each pier. It is in many places adorned with angels, supporting the arms of Richard II. and of Edward the Confessor. The stone moulding, that runs round the hall, has likewise many devices, allusive to Richard II. the hart couchant under a tree. Their

construction has been justly admired for its simplicity and elegance. The whole roof, as well as the more ancient parts of the hall, is in the highest state of preservation. The sky-lights and dormer-windows in the roof, are evidently modern additions, and rather interfere with the general simplicity of it. Yet, notwithstanding, the lights produced from them will afford to the eye of the painter a brilliant variety of tints, diffusing themselves over this richly-ornamented roof." P. 227.

" Westminster Hall was built in 1097 by William Rufus; its original length was, according to Stowe, 1270 feet, and its breadth 74. When the king heard men fay that this hall ' was too great, he answered and faid: " This hall is not big enough by the one half, and is but a bed-chamber. in comparison of that I mean to make". It was repaired by Thomas Becket, in 1163, and, in 1397, in the reign of Richard II. it underwent fo thorough a repair, that it may not be improperly faid to have been rebuilt; for ' the walls, windows, and roof, were taken down and new made, with a flately porch, and divers lodgings of a marvellous work, and with great costs.' These expenses were defrayed, by granting a licence to strangers who were banished, or had fled their countries, and had taken re-

"This hall has been principally used for Christmas and other grand feasts; and, in the year 1236, the twentieth of Henry III. we find it applied to the noble purposes of charity. The king's treasurer was then commanded to cause 6000 poor help-less people to be fed here; 'and when the king knoweth the charge thereof, he would allow it in the accounts.'

"To enumerate all the princely treats and tournaments held here, would be tedious, and foreign to our purpose; yet we cannot omit mentioning two or three of the most material. One feast, held here in 1243, when Richard, Earl of Cornwall, brother to Henry III. kept feast here on his marriage with Cincia, daughter to the Countess of Provence; at which feast were told triginta millia, 30,000 dishes of meat at the dinner.

"In the reign of Edward II. the feast of Pentecost is not unworthy notice. A petition was here presented M m a to the king, by a female on horseback, complaining that he had not fully rewarded his foldiers.

"4"The king fitting royally at the table with his peers about him, there entered a woman, adorned like a minfirel, fitting on a great horfe, trapped as minfirely then ufed, who rode round about the tables, fhowing paftime, and at length came up to the king's table, and laid before him a letter, and forthwith, turning her horfe, faluted every one, and departed.

** Our fovereign lord the king hath nothing courteoufly respected his knights, that in his father's time, and also in his own, have put forth their persons to divers perils, and have utterly lost, or greatly diminished their substance, for honour of the said king; and he hath enriched abundantly such as have not borne the weight, or get of the business,"

"The last and most magnificent festival to which we shall advert was that given by Richard II. on completing the repairs of the hall in 1399. Here were duly kept justings, and running at tilt; whereunto fo many people reforted, that there were fpent twenty-eight oxen, three hundred theep, besides fowl without number: the king caused a gown for himself to be made, of gold, garnished with pearl and precious stones, to the value of 3000 marks. He was guarded by Cheshire men, and attended by thirteen bishops, besides barons, knights, &c. &c. That the household that came every day to meat, confifted of 11,000 people; as appeareth by the messes told out of the kitchen to 300

"From this account, we can readily believe that the king kept 2000

"In a curious book, published some years ago by the late Gustavus Brander, Esq. called the Form of Cury, the luxuries of the table of this monarch will be most clearly ascertained. It was compiled in 1390, by the principal cooks of the kitchen of this epicurean monarch.

"Thus various have been the uses to which this grand edifice has been applied. The poor, as well as the rich, have each, by turns, had their festivities; justice has invariably and impartially been administered;

Parliaments have fat here; peers have been tried; and one king has here been condemned to death.

"The days of chivalry are likewife occasionally renewed in the hall; and a champion, equipped in armour of pasteboard, dares all the world to single combat, in defence of his royal master's just rights to the crown of these realms." P. 244.

EXTRACTS.

HOSPITAL OF ST. CROSS-REMARK-ABLE CUSTOM.

" ONE mile from Winton is the village of St. Crofs; remarkable on account of its hospital (built and endowed by Henry de Blois, Bishop of this diocese in the reign of King Henry the First) for the maintenance of poor decayed tradefmen, who live in small habitations, not unlike the rooms in college. There was formerly an established table, for the daily support of one hundred persons from the neighbouring parishes, who reforted hither, and were hospitably entertained: for many years, however, this part of the charity has been altered; and the money which had before been expended in this manner appropriated to the establishment of the master, the chaplain, and other officers, who enjoy a very eafy life and comfortable falaries.

"There is a custom retained here to this very hour, which originally sprung out of the ruins of good old English hospitality—that of affording the relief of a piece of bread and a hornfull of beer, to every traveller,

ftranger,

firanger, and pilgrim, who knocks at the gate and demands it: and there are not a few, who, from motives of curiofity, are induced to make the application; which must always be atsended to, be the applicant of what rank or quality foever, or his vifits never fo frequent. P. 24.

WINCHESTER CATHEDRAL-RA-VAGES OF CIVIL WAR.

" A SCREEN or partition of ftone, defigned by Inigo Jones, separates the choir from the body of the church. In two niches in this screen are the flatues of James the First and Charles the First, in copper; and you are hown in the drapery of the latter, a perforation made by a musket ball, when the foldiers under Sir William Waller (Oliver Cromwell's general) entered the church.

" No place however facred can be fecure from the ravages which religious frenzy has fometimes prompted men to commit; but one is at a lofs to account for that favage barbarity which could lead even the most dislolute of the human species, so far to forget their common nature, as to violate the rites of sepulture which in all nations have been held facred, and to ranfack for plunder the mansions of the dead.

"We find this puritanic army, which had engaged in the contest oftensibly for the support and defence of the religion of their country, diffracing Christianity itself, by actions of the most shameful atrocity. The bodies of the ancient British monarchs were torn from their graves, and their bones made use of in the destruction of the windows of the church.

se From the tomb of Rufus was taken a ring, with a ruby of large fize and great value; and that nothing might escape the vengeance of these vile miscreants, the noble monuments of kings and awful fathers of man-* kind' were broken and mutilated, and many of the statues suffered decollation, and every other indignity which could be devifed by an infuriated banditti of fanatical enthusiasts.

"It is faid, that one of the grenadiers in Waller's army, having been educated in a school founded by Bishop Wykeham, placed himself a voluntary centinel to protect the beautiful mau-

foleum of that great man, which hap-

pily escaped untouched.
"The fragments of broken glass, being collected, now form the great west window; which ' sheds a dim religious · light' through this promiscuous asso-ciation of pieces." P. 31.

REMARKABLE EPITAPH IN THE CA-THEDRAL CHURCHYARD.

" In Memory of THOMAS THATCHER, a grenadier in the northern battalion of Hampshire militia: who died of a fever contracted by drinking small beer,

May 12, 1764. In grateful remembrance of whose univerfal good-will towards his comrades, this stone is placed here at their expense, as a small testimony of their regard and efteem.

Here lies an honest Hampshire grenadier.

Who kill'd himself by drinking cold fmall beer:

Soldier! be warn'd by his untimely

And when you're hot, drink strong, or none at all.

"This monument being decayed, was renewed by the officers of the royal artillery and of the West Kent and Susfex regiments of militia, in garrison at Winchester, in 1781, and the following couplet added :-

" An honest soldier never is forgot, Whether he died by musket or by pot." P. 35.

PLYMOUTH-MILL PRISON.

" AFTER dinner we took a walk to Mill prison, the place of confinement for French prisoners: where, notwithstanding the accounts propagated to the contrary, we were happy to find them in possession of many comforts as well as every necessary. The licentious liberty of republicanism feemed, even here, to require a check -the most indecent pictures, and pieces of carved work, being conftant-ly exposed for fale. We were informed that a fever had lately made great ravages in the prison-and were not furprifed to hear this, when we walked round the fouth-west wall, where the flench stench of the fewers was intolerable. I should not have been thus minute, if I had not entertained a hope, that the hint may reach those whose peculiar province it is to regulate places of confinement; and that they may be induced to effect some beneficial alterations, in a matter which fo greatly concerns the welfare of our fellowcreatures. The very existence of putrid fever might, undoubtedly, be ex-

tirpated in this country.

" The modern improvements which have been made in the metropolis, and in all large manufacturing and populous towns, evince the truth of this The plague is not now affertion. heard of in England: and, as the ravages of that most highly putrid and destructive disease have been prevented, by the increase of cleanliness among the lower orders of fociety, fo there is no doubt, that the free circulation of pure air, and the admittion of plenty of good water, to places of close confinement, would, in a great measure, annihilare infection." P.209.

SMUGGLERS.

" IN going down the hill, towards Kingfand, we met several females, whole appearance was fo grotefque and extraordinary, that I could not imagine in what manner they had contrived to alter their natural shapes so completely; till, upon inquiry, we found that they were fmugglers of spirituous liquors; which they were at that time conveying from their cutter to Plymouth, by means of bladders fastened under their petticoats: and, indeed, they were so heavily laden, that it was with great apparent difficulty they waddled along

"This illicit traffic is carried on without the least apprehension of the confequences of detection; -the fmugglers finding a conftant market for their contraband articles, at Plymouth Dock and the neighbouring villages-and feldom meeting with any interruptions from the excise officers, who, if attentive to the discharge of their duty. might feize vast quantities of smuggled goods, at every hour in the day

"The principal annoyance to these bonest traders, is their intercourse with drunken failors; to whose insults and frolics they are perpetually exposed, both in the road to Crimble-ferry and in their paffage over the water—and it

is not unfrequently that thefe jolly fons of Neptune pierce the bladders with their knives, and highly enjoy the confusion they have occasioned.

" Smuggling feems to conflitute a regular trade, among the lower orders of people, on this coaft-and fome hundreds gain their livelihood by it."

P. 227.

THE GREAT MINE AT POLGOOTH.

"THIS vast subterranean cavern is faid to be one hundred and twenty fa-

thoms deep.

"The shafts where the miners defcend, and by which the ore is raifed to the furface, are scattered over an extent of steril country; whose dreary appearance, and the fallow faces of the miners, concur to awaken the most difmal and gloomy ideas. But, though rugged the furface, the interior is fraught with the richeft treasures, 'hid fast in the quarries, or funk deep in the mines.' Though withered the complexion and miserable the appearance of the human race, by their labours are the finest works of art brought to perfection, and their industry is a

ftrong pillar of the ftate.
"The descent into the mine is performed by means of ladders placed almost perpendicularly, so that it is a very dangerous passage. You are furnished with a suit of clothes, adapted to the fervice you are about to engage in, upon fignifying your intention to visit the interior of the mine; and are accompanied by a guide, who carries

a light before you.

"The damps of thefe subterraneous caverns are fometimes fo baneful and offensive, that the stranger, unaccustomed to expeditions of this nature, is not unfrequently tempted to recede, rather than subject himself to their noxious effects.

" We descended more than forty ladders, flippery with humidity; and fome of them almost worn out by the feet of the labourers, before we reached

the deepest part of the mine.

"At the foot of each ladder is a narrow pause, or landing-place; and, at certain intervals, are openings into different beds of ore. I did not learn. that there was any material difference between the quality of the tin dug in the lowest stratum, and that which is found nearer the furface; but the quantity of clay, fpar, drofs, mundic, &c. mixed with the ore, varies in different parts. Some specimens were shown us, of a beautiful intermixture of copper, filver, and tin ore, with very brilliant and transparent spar.

Those who dig in these wretched and dismal excavations, are under the necessity of breathing so much impure air, that their health is speedily injured; and they die, at an early period, hectic or paralytic.

"The wages paid for labour are, however, to confiderable, that workmen are always to be met with, ready to facrifice their health and ftrength in these dark and gloomy mansions.

"At about the depth of fifty or fixty feet below the furface, water begins to collect; percolating through the different strata. The lower parts of the mine would, of course, be overslowed by it, and the working of the ore completely obstructed, if it were not constantly carried off:—this process is now performed by an immense steamengine.

The very extraordinary fize of this flupendous piece of mechanifm, which is faid to have coft twenty thoufand pounds, induced me to make fome inquiries respecting its force, powers,

and capacity.

"I was informed, that the quantity of coal used to keep it in motion was seventy-two bushels in twenty-four hours. It raises fixty-three gallons of water at every stroke, and performs fourteen of these motions every minute. The water thrown out upon the surface, by means of this wonderful machine, runs off like a river; and, heing conducted to the mine before described, under the name of the Happy Union or Steam-mine, is there made nse of, to separate the ore from the foil, in the manner already mentioned.

"There are two engines of this kind employed, during the wet feafons; but, in the fummer, one only is found fufficient to carry off all the fuperfluous water: the quantity of which, upon an average, daily thrown out, according to the preceding calculation, must be upwards of nine hundred thousand gallons. But, notwithstanding the wonderful powers of the machine, the nicety of its poize is so exactly regulated, and its perfection so complete, that the slightest pressure made with the palm of the hand upon a fort of bolt or key

attached to a large valve, immediately suspends the operation of the whole; which is again as instantly restored, upon the removal of the force applied." P. 255.

PICTURES AT PORT ELIOT—ANEC-DOTE OF REYNOLDS AND REM-BRANDT.

"THERE is an old half-length figure, over the chimney in the library, done for Sir John Eliot, in the year 1632, a few days before his death, which happened in the Tower of London; where he was confined, and treated with the utmost rigour and barbarity. He is depicted with a starved countenance, and meagre figure; has on a coarse linen combing gown, and a small tooth comb in his hand, supposed to be intended to express the hardships to which he was reduced in his confinement.

"In the faloon is the only original painting now in England, and perhaps extant, of the celebrated John Hamp-

den, dated 1643." P. 285.

"We were much pleased with an admirable group of eleven figures (the portraits of Richard Eliot, Esq. Harriot his wise, and their children, with Mrs. Goldsworthy and the Honourable Captain Hamilton), done in 1746, by Sir Joshua Reynolds; and which, Lord Eliot assured me, was the first group which that admired painter ever attempted.

"It is particularly remarkable, that, while fo many fine performances of that great master are fading almost visibly before us, this still retains its colours in all its pristine beauty. How greatly it is to be regretted, that Sir Joshua ever went abroad, to learn the art of fpoiling his own paintings! I believe very few have been executed by him, fince that period, which retain their colouring; and I am informed, that, in the gallery of painters at Florence, to which fo many moderns fent their own portraits, that of Sir Joshua Reynolds, which was esteemed a most striking likeness, is now scarcely to be traced upon the canvafs.

"There is an incomparable picture of the two mifers; in which it is very evident, that the best of the two heads has been cut out of some other piece, and the drapery and accompaniments

afterwards added.

46 Sir

" Sir Joshua Reynolds, whose intimate acquaintance with the characteriftic features of the art rendered him most undoubtedly an excellent judge, has not scrupled to declare his conviction, that the head before mentioned is the work of Quintus Maceus (Matfys), (by whom that defervedly celebrated picture of the Mifers at Hampton Court was done); and that he was equally certain of the other head and the drapery being the work of Rembrandt; who stands thus accused of having stolen the former from one of Quintin Metcy's (Matfys) best pictures, and to have passed it off as his own performance." CHARMOUTH-PYRITES.

"A REMARKABLE phenomenon is related to have happened here,

""
After very hot weather, followed by fudden rain, the cliffs near
Charmouth began to fmoke; and
foon after to burn, with a vifible but
fubtile flame; which continued to be
the cafe, at intervals, for fome weeks,
efpecially after rain."

"The cliffs, near this place, were afterwards examined, and a great quantity of pyrites was found interspersed in large masses, through a dark-coloured loam, impregnated with bitumen—and here and there lumps of vitriolic flone.

"Portions of these cliffs, containing the pyrites, were collected by a neighbouring gentleman, who caused them to be wetted every day, for some time; and then ignition took place in the manner before mentioned.

"The colour of the pyrites depends upon the predominant quantity of one of the four ingredients which enter into its composition:—namely, fulphur, vitriol, arsenic, and iron.

"The furface of barren land, in various parts of Devonshire, particularly near Plymouth, abounds with this compound. It is generally of a greenish hue; but I do not find that any attempts are made to extract from it those useful substances, copperas and fulphur, which it contains in so large quantities.

"In Derbyshire, copperas is obtained from some; but even there, where mineral concerns are much attended to, I believe they do not extract the sulphur." P. 345.

Vol. IV .- No. XXXVII.

TUMULI-WODEN'S DYKE.

"IN journeying toward Salisbury, we observed upon the downs, on the right, several barrows of different sizes, chiefly circular:—one, very large tumulus, on the left, oval or navicularly shaped, such as Dr. Stukeley speaks of.

"In another part of the road we faw many fmall and low barrows, enclosed by a circular mound of earth.

"The councies of Dorfet and Wilts are divided by a great vallum or ravine, called Woden's Dyke, and now, by corruption, Bogleigh or Bogley Ditch—the course of which crossing our road, we could trace it for, at least, two miles.

"I inquired of some shepherds, who were tending their flocks on the downs, where this bank terminated—one of them said, 'A terrible ways off.' Upon asking how far that might be, we were answered, 'They zays it goes into 'Vrance, but I never zeed it myself.'

"The largest tumulus is about ten miles from Salisbury: there is a kind of circle described by nine or ten barrows (some of them large, others very small), and in the centre is a ring, and a small tumulus or rising within it. Whether this was the burial-place of some chieftain or person of note, or whether the rank of the deceased was distinguished by the size of the tumulus, I do not know.

"It has been supposed, that the bones of the vulgar dead were deposited in a circle, afterwards covered over with turf, near the place where their leaders were buried; but I am rather inclined to savour the opinion, that the chief was inhumated in the centre, and those who had fallen under his command, placed under barrows around him—but out of the circle, which enclosed his own tumulus.

"And it has likewise been said, that the Danes only enclosed the barrows of their chiefs with a raised circle of earth; but this opinion is not generally affented to." P. 352.

LVI. Narrative Sketches of the Conquest of the Mysore, effected by the British Troops and their Allies, May 4, 1799. Exhibiting a concise View of the Origin of the War, March of the Armies, Action at Seedaseer, Battle of Malavelly, N n Siege of Seringapatam, Storm and Capture, Fall of Tippoo Sultaun, Royal Treafury, and the final Arrangements of the Conquest. With Notes, descriptive and explanatory. Collected from authentic Materials. With a Frontispiece. 12mo. pp. 135. 28. West and Hughes, Clarke, New Bond Street.

EXTRACT.

TIPPOO SULTAUN --- THE NUMBER OF SLAIN AT THE SIEGE, &c.

"IT is not yet known by whose hand this tyrant of the east was laid low; in all probability the jewels which he always wore about his perfon, and were now become the spoil of the fortunate soldier, whoever he might be that was his conqueror, are too precious to be hastily acknowledged.

" Not less than three hundred people (fome accounts fay five hundred) were killed, and more than that number wounded, under the fatal gateway; of course it became impassable, excepting over the bodies of the dead and dying: one of our officers endeavouring to climb this heap of flaughter, in his way to the inner works, was accosted in the most abusive language * by a bleeding wretch, miferably maimed and almost expiring, who ftruck at him with his shattered hand (the only semblance of a limb which the fate of the day had left him), in all the rage of favage difappointment and despair.

Among the crowd of domeftic attendants about the Sultaun's perfon when he fell, were a number of his women, whose apparent anxiety had led them' to share the perils which every where surrounded him: several

of them were that promiseuously with his guards, and from the general beauty and elegance of their appearance under all the disfigurements of wounds and death, formed interesting and affecting objects to European feelings. One woman, feemingly of superior rank and beauty, was noticed in a fituation of peculiar diffress, being fo covered with dead bodies, although evidently alive, that only her head was visible: on clearing away the incumbrances from around her, the poor creature was brought forward speechless, and nearly infensible, but not having received any wound, the was, by the humanity of an English officer, speedily recovered. From two old women who affifted in the recovery of this lady, the officer was given to underitand that Tippoo fell close to the person they had released; little credit was attached to their information at the time, although it proved afterwards that he was actually one of those who dropt near this unfortunate female, and had been haftily turned aside in order to effect her liberation.

fufficie

the Su

" The fearch for the body, by torch light, under the immediate observation of General Baird, accompanied by the killedar of the fort and others, occupied nearly two hours: when found it was perfectly warm but quite dead, being wounded in five places .-The countenance was no way distorted, but had an expression of stern compofure: his turban, jacket, and fword belt were gone, but the body was recognifed by feveral Hindoos prefent to be ' Padshaw,' i. e. the king; and an English officer, with the leave of General Baird, took off his right arm the talifman which contained, fewed up in pieces of fine flowered filk, an

* "It may be here neceffary to inform the European reader, that violent threats, abutive language, and the most horrid execrations form a part of the offensive discipline of the Indian soldiery, who generally rush into action enflamed with bang and other intoxicating drugs, and meet their enemy with the utmost ferocity of looks, voice, and gesture, thereby adding to the force of their weapons every concomitant energy their maddened faculties can supply them with. In proportion as the slimulating dose has operated, those who fall in the contest expire in different degrees of increased outrage and horrid defiance, as exemplified in the above instance.

"It has been remarked by a well-informed writer, respecting the general operations of our forces in the east, that 'the numbers of the Asiatic armies, the ferocity of their manner, and the novelty of their appearance, would unnerve and overcome the hearts of the small European bodies that are opposed to them in the field of battle, if experience had not sufficiently proved how much the silence of discipline, and uniformity of design and action, excel barbarian

'noise, and the desultory efforts of brutal force'."

amulet

amulet of a brittle metallic substance of the colour of silver, and some manuscripts in magic Arabic and Persian characters, the purport of which, had there been any doubt, would have sufficiently ascertained the identity of the Sultaun's body. One of our offi-

cers was fortunate enough to meet with a little Koran, also in a filver case, which the Sultaun constantly wore round his neck, and which had been detached in the preceding confusion." P. 86.

MONTHLY CATALOGUE.

NEW PUBLICATIONS.

AGRICULTURE --- ARTS AND SCI-ENCES --- ART MILITARY.

THE profitable Planter; a Treatife on the Cultivation of Larch and Scotch Fir Timber; showing that their excellent Quality (especially that of the former) will render them so extensively useful, as greatly to promote the Interests of the Country: with Directions for Planting, in various Soils and Situations, by a new and expeditious Method; also, for the Management of Plantations. To which are added, useful Hints, in regard to Shelter and Ornament. By W. PONTEY, Nurseryman and Planter. 8vo. 3s. 6d. Vernor and Hood.

Observations on the Failure of Turnip Crops; with Propofals for a Remedy not altogether new, yet not fully confidered by agricultural Writers. By the Rev. H. P. STACY, L. L. B. F. L. S. 8vo. 18. Hatchard. The System followed during the last two Years by the Board of Agriculture, further illustrated with Disfertations on the Growth and Produce of Sheep and Wool, as well Spanish as English: also Observations upon a new Plan for the Poor and Poor Laws. To which are added, Remarks on the Modes of Culture and Implements of Husbandry used in Portugal, and an Inquiry into the late Scarcity, and Means proposed to remedy it in future. By JOHN Illustrated LORD SOMERVILLE.

with Plates. 4to. 158. Miller.
A Differtation on the Progress of the Fine Arts. By John Robert Scott, D. D. 4to. 38. White.

The Principles of English Farriery vindicated; containing Strictures on the erroneous and long-exploded System, lately revived at the Veterinary College; interspersed with curfory Remarks on the Systems of Solleysell, De Saunier, De la Fosse, &c. &c. in which is fully displayed the Superiority of English Farriery over that of foreign Nations. By JOHN LANE, A. V. P. late of the second Regiment of Life Guards. 8vo. 4s. Riebau, Egerton.

British-Indian Book-keeping: a new System of Double Entry and Progressive Adjustment, by a perspicuous Process never before adverted to, saving much Trouble and preventing Delay. By J. W. Fullon, of the Office of the Accountant to the Board of Revenue, Bengal. 8vo. 6s. Vernor and Hood.

An Essay on Military Law, and of the Practice of Courts Martial. By ALEXANDER FRASER TYTLER, Essay Advocate, and Judge Advocate of North Britain. 8vo. 7s. Egerton. Anecdotes of the Arts in England; or, comparative Remarks on Architecture, Sculpture, and Painting; chiefly illustrated by Specimens at Oxford. By James Dallaway, M. B. F. S. A. Earl Marshal's Secretary. 8vo. 10s. 6d. Large Paper 18s.—Cadell and Davies.

BIOGRAPHY.

Plutarch's Lives, abridged into one Volume, adapted to the practical Use of English Schools. By WILLIAM MAVOR, L.L. D. &c. 12mo. 4s. 6d. bound. Phillips, Hurst. N n 2 CHEMISTRY.

CHEMISTRY.

Refearches chemical and philosophical, chiefly concerning Nitrous Oxide, or dephlogificated Nitrous Gas, and its Respiration. By H. DAVEY, Superintendant of the Pneumatic Institution at Clifton. 8vo. 10s.6d. Johnson.

EDUCATION.

The Elements of polite Education, carefully felested from Lord Chefterfield's Letters to his Son. By GEORGE GREGORY, D. D. Author of "Essays historical and moral," of the "Economy of Nature," &c. 12mo. 4s. 6d. bound. Phillips.

Aphorisms on Education; selected from the Works of the most celebrated English, French, and Latin Writers, on that Subject; and intended as a Vade-mecum for Parents, Guardians, Preceptors, Governesses, &c. In three Parts: I. as relating chiefly to the Male Sex. II. With particular Reference to the Female Sex. III. Remarks of general Application to both. 12mo. 3s. Longman and Rees.

An Account of two Charity Schools, for the Education of Girls; and of a Female Friendly Society in York: with Reflections on Charity Schools and Friendly Societies in general.

By CATHERINE CAPPE. 12mo.

38. Johnson.

Domestic Tales. From the German. By Miss Bell Plumptre. 18ino. Bound 25. Vernor and Hood.

GEOGRAPHY.

The Oriental Geography of Ehn Haukal, an Arabian Traveller of the tenth Century. Translated from an original Manuscript in his own Possession: collated with one preserved in the Library of Eton College. By Sir WILLIAM OUSELEY, Knight, L. L. D. With a Map. 4to. 11.78. Gadell and Davies.

GRAMMAR.

Latin Profody made eafy; or, Rules and Authorities for the Quantity of final Syllables in general, and of the Increments of Nouns and Verbs; intersperfed with occasional Observations and Conjectures on the Pronunciation of the ancient Greeks and Romans. To which are added, Directions for scanning and com-

posing different Kinds of Verse; followed by analytical Remarks on the harmonious Structure of the Hexameter: together with synoptic Tables of Quantity for every Declension and Conjugation. By J. CAREY. 8vo. 5s. Robinsons, Ca. dell and Davies.

HISTORY-TOPOGRAPHY.

Observations on the Manners and Customs of the Egyptians; with Remarks on the Plague, &c. By John Antes. 4to. 10s. 6d. Stackdale. The Annual Register; or, a View of History, Politics, and Literature, for the Years 1796—1797. 8vo. 3s. each. Otridge, Faulder.

A concife History of Greece, from the earliest Times, to its becoming a Roman Province. By JOHN PAYNE, Author of the "Epitome of Modern History. In 2 Vols. 8vo." Vol. I. 8vo. With Plates. 9s. To be completed in 3 vols. Johnson.

An historical Account of those Parishes in the County of Middlesex, which are not described in the Environs of London. By the Rev. Daniel Lysons, M. A. &c. 4to. 11.7s. Large Paper 21. 2s. (See p. 241.) Cadell and Davies.

A Companion in a Visit to Netly Abbey, with an Engraving of an inside View of the Abbey. To which is annexed, Netley Abbey, an Elegy. By G. Keath, Esq. 12mo. 18.

Baker, Southampton; Wilkie, Lon-

don.

Observations upon the Town of Gromer, considered as a Watering-place, and the picturesque Scenery in its Neighbourhood. By EDMUND BARTELL, Jun. With Frontispiece. 8vo. 3s.6d. Holt printed; Hurst, London.
